

## Variety Description Key

A CHECK CHARACTERISTICS box has been placed at the bottom of each table to display the long term yield, number of site years and any other check attributes information.

Except for the long term average yield, variety description information for canary seed and buckwheat was obtained from the Co-operative Registration Trials.

Site Years Tested is the cumulative number of locations over the years that a variety has been tested against the check. The more site years the more dependable the data.

Ⓒ Indicates a variety that is protected by Plant Breeders Rights or a variety where protection has been applied for but not yet granted at time of printing.

## Key to 2012 Yield Tables

Yields derived over two or more growing seasons are the best indicator of variety performance. For new varieties, 2012 Average Yield over all sites is more reliable than data from a single location. Use single site year data with caution.

CV% = Coefficient of Variation. A measure of random variation in a trial. A low CV is desirable.

LSD = Least Significant Difference. Varieties must differ by the LSD value to be considered significantly different from one another.

Sign Diff = Significant Difference. Indicates if a real difference exists between varieties at an individual site.

## Special Crops

# It's Unanimous!

Emerge victorious with nitrogen and phosphate.

The formidable one-two punch in TagTeam® continues to knock out the competition. It beat single-action (nitrogen-only) competitors in farmer-conducted, head-to-head trials by a walloping 7%.\* TagTeam boosts nitrogen and phosphate uptake to remain the world's only undisputed *MultiAction*® champion.

Give your crops twice the fight right from the start with TagTeam.

TagTeam®

*MultiAction*®  
Legume Fertility

Novozymes is the world leader in bioinnovation. Together with customers across a broad array of industries we create tomorrow's industrial biosolutions, improving our customers' business and the use of our planet's resources. Read more at [www.novozymes.com](http://www.novozymes.com).

novozymes®  
Rethink Tomorrow

Smart farmers read the fine print.

\*On average, TagTeam pea and lentil inoculants outperformed competitor, single-action (nitrogen-fixing only) inoculants by 7% in independent large-plot research trials. That's an average increase of 2.7 bushels per acre. Summary of 33 lentil and 85 pea independent large-plot research trials conducted between 1997 and 2012.

<sup>1</sup> TKW ranges from 7.1 g to 8.0 g, L= Large, M = Medium, S= Small.

# GRAIN CORN

## Comments:

The 2012 grain corn hybrid trials were tested and the data donated by the Manitoba Corn Committee. The data presented is for one year only. Use with caution.

All hybrids are evaluated at a plant population of 28,000 plants per acre. Plots are planted at a higher rate and thinned to achieve the target population.

Yields are corrected to 15.5% moisture content. Due to space limitations, only yield and moisture content at harvest is presented but bushel weights and days to silking were also determined.

The Manitoba Corn Committee publishes the annual results with all yearly data, as well as long term data, in their brochure which is available from the Manitoba Corn Grower's Association (204-745-6661) and at local Manitoba Agriculture, Food & Rural Initiatives offices.

<sup>1</sup> Each company assigns a corn heat unit (CHU) rating to each of their hybrids. The CHU rating is a measure of relative maturity and is one criteria for choosing a hybrid which will mature in your area. Moisture content at harvest, density, and days to 50% silk are other measurements to look at when evaluating the relative maturity of a hybrid.

# INDUSTRIAL HEMP

## Comments:

A licence from Health Canada is required to grow Industrial Hemp.

THC testing for some varieties is required.

As per the Industrial Hemp Regulations, industrial hemp varieties must be approved for commercial cultivation under licence for the current crop year. Please refer to Health Canada's "List of Approved Cultivars" for the 2013 Growing Season report prior to seeding.

Please note that the Industrial Hemp Regulations requires that all seed planted for the production of industrial hemp in Canada must be of pedigreed status (Certified or better).

For more information, please refer to Health Canada's website at [www.healthcanada.gc.ca/hemp](http://www.healthcanada.gc.ca/hemp).

### MODEL 919™ MOISTURE TESTER

Shown with digital scale.  
New storage/transport case for any model 919 & dig. scale.  
Install tester inside the case along with any digital scale.  
Protects your meter when not in use & allows for easy transport.  
**Also available:** Test weight & canola equipment, digital scales, sample probes & thermometers.

### TEST WEIGHT EQUIP.

ABS Funnel with 0.5L measure & striker.  
Smart Scoop Dig.  
Bu. Wt Scale.

### INFRA-RED BIN PROBE

10' length total, 2 - 5' sections that couple together. Quick temperature measurement without removing the probe.  
Temperature displayed digitally on small hand held unit.

### SIEVES

Canola, Flax and Cereal sieve sets.  
Full range of sizes, injection molded frame. Fits into existing metal sieves.

### SMART CHARTS II

NEW Hand Held Automated Smart Charts II. NO MORE PAPER CHARTS! Choose your commodity, enter temp. & dial drum # and the % moisture is displayed.  
Allows for temp. >30°C or <11°C.  
NEW: 10' multi-zone rigid wireless bin probe with 4 temp. sensors. Fully wireless temp. measurement & display on Smart Charts II.

### SAMPLE PROBES

4, 6, 8 and 10 ft. probes. Lightweight anodized aluminum construction.
