

## Variety Description Key

A "CHECK CHARACTERISTICS" box has been placed at the bottom of each table to display the long term yield, number of site years and any other check attributes information.

Except for the long term average yield, variety description information for canary seed and buckwheat was obtained from the Co-operative Registration Trials.

Site Years Tested is the cumulative number of locations over the years that a variety has been tested against the check. The more site years the more dependable the data.

☞ Indicates a variety that is protected by Plant Breeder's Rights or a variety where protection has been applied for but not yet granted at time of printing.

## Key to 2013 Yield Tables

Yields derived over two or more growing seasons are the best indicator of variety performance. Use single site year data with caution.

CV% = Coefficient of Variation. A measure of random variation in a trial. A low CV is desirable.

LSD = Least Significant Difference. Varieties must differ by the LSD value to be considered significantly different from one another.

Sign Diff = Significant Difference. Indicates if a real difference exists between varieties at an individual site.

## Special Crops

A photograph of two men standing in a lush green cornfield. The man on the left is wearing a light blue button-down shirt and jeans, while the man on the right is wearing a dark blue polo shirt. They are both looking off to the side. The corn plants are tall and vibrant green, and the sky is a clear, bright blue with some light clouds. The sun is visible in the upper left corner, creating a lens flare effect.

ALL OF OUR SEED IS FIELD-TESTED.  
JUST LIKE OUR REPS.

Your Pioneer Hi-Bred sales representative is out there every day, working the same ground you are. Which gives them the unique expertise needed to recommend the right seed for your acres. They know your weather, your soil conditions and your challenges because they've faced them too. It's this type of deep knowledge that makes the DuPont Pioneer team both industry leaders and trusted local advisors. Talk to your local Pioneer Hi-Bred sales representative or visit [pioneer.com](http://pioneer.com) for more information.

**Our experts are grown locally**

## BUCKWHEAT

### Comments:

The buckwheat variety trials were tested by MCVET and partially sponsored by the Manitoba Buckwheat Growers Association.

<sup>1</sup> TKW ranges from 7.1 g to 8.0 g, L= Large, M = Medium, S= Small.

# GRAIN CORN

## Comments:

The 2013 grain corn hybrid trials were tested and the data donated by the Manitoba Corn Committee. The data presented is for one year only. Use with caution.

All hybrids are evaluated at a plant population of 30,000 plants per acre.

Yields are corrected to 15.5% moisture content.

The Manitoba Corn Committee publishes the annual results with all yearly data, as well as long term data, in their brochure which is available from the Manitoba Corn Grower's Association (204-745-6661).

<sup>1</sup> Each company assigns a corn heat unit (CHU) rating to each of their hybrids. The CHU rating is a measure of relative maturity and is one criteria for choosing a hybrid which will mature in your area. Moisture content at harvest, density, and days to 50% silk are other measurements to look at when evaluating the relative maturity of a hybrid.

# we know corn

**Technology you want.  
Yield you can count on.**

When it comes to early corn with proven yields - look to Maizex. Exclusively distributed by NorthStar Genetics. **Contact a dealer near you or visit [weknowbeans.com](http://weknowbeans.com)**

# INDUSTRIAL HEMP

## Comments:

A licence from Health Canada is required to grow Industrial Hemp.

THC testing for some varieties is required.

As per the Industrial Hemp Regulations, industrial hemp varieties must be approved for commercial cultivation under licence for the current crop year. Please refer to Health Canada's "List of Approved Cultivars" for the 2014 Growing Season" report prior to seeding.

Please note that the Industrial Hemp Regulations requires that all seed planted for the production of industrial hemp in Canada must be of pedigreed status (Certified or better).

For more information, please refer to Health Canada's website at [www.healthcanada.gc.ca/hemp](http://www.healthcanada.gc.ca/hemp).

# There's a lot of potential in these seeds.

## Help realize it with the number one inoculant.

 **Nodulator® N/T**  
the BioStacked inoculant

There's a reason Nodulator® N/T is the best-selling soybean inoculant in Canada. It's the only one that's BioStacked®. Unlike ordinary offerings, a BioStacked inoculant delivers multiple beneficial biologicals to enhance the performance of soybeans. These help increase root biomass, create more nodules and improve nitrogen fixation. Of course at the end of the day, all you have to know is what it does for your bottom line. Nodulator N/T out-yields non-BioStacked inoculants by 4-6%. So why settle for ordinary? Visit [agsolutions.ca](http://agsolutions.ca) or contact AgSolutions® Customer Care at 1-877-371-BASF (2273) for more information.

 **BASF**  
The Chemical Company

**Always read and follow label directions.**

AgSolutions is a registered trade-mark of BASF Corporation; NODULATOR and BIOSTACKED are registered trade-marks of BASF; all used with permission by BASF Canada Inc. © 2013 BASF Canada Inc.
