25 years, **STILL PROVEN**

WHAT A STORY. Times change, your farm grows, yet Proven® Seed is still a strong, dependable brand that growers can count on. From our first commercial seed varieties, including Delta canola, Derby oats, Stein barley and Heinrichs alfalfa, to our new, high-performing genetics in canola, cereals and forages — thank you for 25 years of growing, and succeeding, alongside Proven Seed in Western Canada. provenseed.ca

Minister's Message

As the Minister of Agriculture, Food and Rural Development (MAFRD), I encourage you to explore the 2016 edition of *Seed Manitoba*. You will find the latest information on important crop variety attributes from disease tolerance to potential yield performance. As well, it introduces new varieties of oilseeds, cereals, speciality crops and forages to be grown throughout Manitoba.

This guide has been made possible by the combined efforts of many; those that manage research plots to provide variety performance data, and the Manitoba Crop Variety Evaluation Team. MAFRD is pleased to join our partners in the development of this important tool for planning of this year's cropping season. The post-registration variety performance testing that occurs annually in Manitoba is supported by the Manitoba Seed Growers Association, commodity groups, industry partners and MAFRD.

I have full confidence you will find value and guidance in this year's edition of *Seed Manitoba*. I wish you a prosperous 2016 growing season.

Honourable Ron Kostyshyn
Minister of Agriculture, Food and Rural Development

President's Message

The Manitoba Seed Growers' Association is once again proud to be associated with the 2016 edition of the Manitoba Seed Guide. *Seed Manitoba* is one of the most widely used research data bases for crop selection by farmers in Manitoba. The success of this publication results in part from the cooperative efforts of various industry related representatives and specialists who make up the Manitoba Crop Variety Evaluation Team (MCVET). On behalf of the MSGA, I would like to also recognize the combined efforts of Manitoba Agriculture Food and

Rural Development and the *Manitoba Co-operator*. The partnership between the Provincial government, The *Manitoba Co-operator* and the MSGA has spanned over 3 decades of Seed Guide publications, and this partnership remains strong and progressive with projects, either completed or currently underway, providing further resources to Manitoba Producers.

Changes to the way we do business as commercial producers and seed producers have occurred under UPOV'91 since the 2015 edition of *Seed Manitoba*, and I urge you, as a value chain member to get educated on your responsibilities as stewards of Canada's grain system. Everything you need to know about the new Plant Breeders' Rights regulations can be found within the 2016 *Seed Manitoba*.

As you use the variety trial results to decide which varieties are right for your operation remember that your local seed grower can often provide added, regional insight on how new varieties compare having grown them alongside the established varieties in the years of seed increase leading up to commercial release.

The board of the Manitoba Seed Growers' Association is proud to be a part of this publication, and it is our wish that as farmers are making important decisions for the 2015 growing season, the resources within this guide will be a critical source of information.

Eric McLean
President, Manitoba Seed Growers' Association

Thank you to MCVET Sponsors and Supporters in 2015

MCVET gratefully recognizes the support and financial contribution of the following organizations:

Manitoba Agriculture, Food and Rural Development	Alliance Seed Corporation
Manitoba Co-operator	CANTERRA SEEDS
Manitoba Seed Growers Association	FP Genetics
Manitoba Pulse & Soybean Growers	SeCan
	Winter Cereals Manitoba Inc.

MCVET greatly appreciates the efforts of our site contractors:

Ag-Quest Inc.	Parkland Crop Diversification Foundation
Canada-Manitoba Crop Diversification Centres	Prairies East Sustainable Agriculture Initiative
Crop Production Services (CPS)	Syngenta Canada Inc.
DL Seeds Inc.	University of Manitoba
ICMS Inc.	Westman Agricultural Diversification Organization
James Richardson International	
Kelburn Farms	
Murphy et al. Inc.	

MCVET would also like to express its gratitude to:

Locally organized variety trials at Stonewall (SICTC), Portage la Prairie (CROP) and Beausejour (ASCA).
Companies and individuals who performed seed quality analysis.
Syngenta Canada Inc. for providing seed treatment.

Welcome to *Seed Manitoba 2016*

by Anastasia Kubinec, Seed Manitoba editor, Manitoba Agriculture, Food and Rural Development

W

Welcome to *Seed Manitoba 2016*, the variety selection and growers' source guide for Manitoba producers. This guide is compliments of Manitoba Agriculture, Food and Rural Development, Manitoba Seed Growers' Association and the *Manitoba Co-operator*.

2015 was another interesting growing season. An earlier start/beautiful wide-open fall; but a late-May frost, strong winds and multiple hail events caused anxiety in following days. It was also the year where lodging tolerance showed up definitively in the field. The right scenario of rapid growth/stem elongation with heavy rain and winds caused numerous cereal, canola, flax and field pea crops to lodge, sometimes multiple times. We also saw some 'green-snap' occurring in corn, sunflower and dry beans, which was also a result of rapid stem elongation, wind or heavy rains and variety genetics.

Consider all traits

Yield potential is always top of mind when looking at the data. We get excited over the yields as well, but other traits need to be considered. Lodging tolerance is important in certain conditions, as a lodged crop can be more difficult to swath or harvest. Lodging at flowering/heading also can result in reduced yields, which many combine operators probably saw in fall 2015. Yields went down, moistures went up and rotor/cylinder speeds spiked while trying to get through those lodged spots.

See the 'Variety Description' tables for a full review of yield, height, maturity, lodging, disease resistance and specific quality attributes, such as protein, oil, test weight, etc. This information is developed though multi-site/year variety registration trials, unless otherwise specified.

As varieties become more commercially grown, some ratings such as disease tolerance can change as breeders and pathologists work

with MAFRD to better reflect commercial performance in the field, based on common disease races being found.

The MCVET trials reviewed by location provide yield and other important attributes depending on the crop type and give a good overview of what occurred in that location this year. The long-term or multi-location performance though, can identify performance consistency, which could be a better indicator of how the variety will perform under multiple environment or conditions. You can also see our online tool of Seed Interactive (www.seedinteractive.ca) to compare variety by specific years and locations comparisons.

The Manitoba Crop Variety Evaluation Team (MCVET) and commodity groups annually co-ordinate the testing and analysis of 15 to 20 crops types at over 20 locations. The varieties tested are entered by either the breeder or the company marketing the variety. On average, there are 7,000 plots being grown in the summer to feed information into the *Seed Manitoba* publication.

Changes in *Seed Manitoba 2016*

The largest change in *Seed Manitoba 2016* that you will see is the different Plant Breeders' Rights (PBR) symbols. Varieties that were pending or applied for PBR after February 27, 2015 will have PBR '91 status. Applications prior to the February 27, 2015 date, will retain the PBR '78 and status that we are used to.

In the cereal section, fall rye is back after a lapse in testing since 2009. The 2015 MCVET trials have included many new varieties, including Canada's first two hybrid cereals.

In winter wheat, stripe rust ratings have been added. In oat, there have been changes to crown rust resistance rating for some varieties due to a change in crown rust pathogen populations in Manitoba. With the change in populations and virulent reactions on varieties, changes needed to be made to reflect what is occurring in the field for impacted varieties.

In spring wheat, the Canada Western Interim Wheat class makes its first appearance in *Seed Manitoba*.

In the oilseed section, all soybeans will have the four-digit heat unit rating (e.g. 2450) completely removed, leaving the decimal maturity grouping (e.g. 00.6) that was introduced in *Seed Manitoba 2015*. Conventional soybeans will have the iron deficiency chlorosis (IDC) ratings added to registered varieties. Dauphin has been added as a site for the Western Canadian Soybean Trials.

Sunflower data returns to *Seed Manitoba 2016* after a more successful season of collecting data. The check variety for the canola performance trials has changed to 5440.

In the special crops section, buckwheat variety testing occurred again in 2015 after a one-year hiatus.

Seed Manitoba continues to be a collaborative effort between industry, government and producers to provide third-party variety performance information. Without the MCVET sponsors, supporters, site contractors and commodity groups that donate data, this publication would not be possible. Special thanks to Patti Rothenburger and Craig Linde of MAFRD who behind the scenes make the transition from organizing trials to data analysis and proofing run smoothly.

We hope you find the information contained in *Seed Manitoba* helpful while you determine your variety choices for the upcoming 2016 growing season.

Nothing changes, Except everything

by Jennifer Seward, Manager, Manitoba Seed Growers Association

B

By the end of February 2016 Canadian farmers will have completed one year under the new amendments to the Plant Breeders' Rights Act. Most producers won't have noticed a difference in how they do business or how they treat the varieties they grow, as the impact of UPOV '91 on production practices hasn't yet trickled down to the farm gate.

Most of the varieties grown in 2015 were not covered by the new legislation, however, this will soon change. It is important that producers understand their role in the stewardship of new varieties under UPOV '91 to ensure continued investment in variety research and to avoid possible liability situations if those varieties aren't handled properly.

UPOV '91 legislation

When Bill C-18 was passed in February of 2015, proponents hailed the bill as a win-win scenario for all value chain stakeholders. The Canadian Seed Trade Association (CSTA) stated in its February 2015 news release that "Farmers will benefit from greater choice as they will have access to more varieties with a wider range of characteristics, including increased productivity and attributes for specific niche markets."

It didn't take long to see variety owners take advantage of the legislation and by April of 2015 the Plant Breeders' Rights Office listed three new PBR '91 wheat varieties, two new oat varieties and one new flax variety, representing interests from both the public and private plant-breeding sectors.

According to Anthony Parker, commissioner of the Plant Breeders' Rights Office, the increase in agricultural crop varieties seeking PBR protection actually started once Bill C-18 was tabled in Parliament. Prior to 2013, the PBR Office would receive approximately 80 new applications for agriculture varieties annually. As the bill moved through the last stages of the parliamentary process, the number jumped to 148 (2014).

This upward trend appears to be sustained. Since the new legislation amendments came into force on Feb. 27, 2015 the PBR Office has

received 87 new applications for agricultural crop varieties.

Parker notes that one of the more interesting aspects is the increase in diversity. "Not only are we seeing applications for the traditional crops such as canola, wheat, barley, and soybeans, but also peas, lentils, fababeans, chickpeas, hemp, mustard, flax and quinoa."

New partnerships

The plant-breeding industry seems to be showing some early signs that the PBR Act/UPOV '91 amendments are indeed stimulating investment in crop variety breeding and research in Canada. There have been several announcements since UPOV '91 was signed, indicating new partnerships and variety breeding efforts. Parker cites a few recent examples: "Bayer Crop Science announced investment in a wheat-breeding facility at Pike Lake, Sask. Canterra Seeds and

Limagrain have announced plans to bring foreign varieties here for testing/evaluation, as well as plans to invest in domestically bred cereal varieties (Limagrain Cereals Research Canada). Also plans of a joint partnership between Agriculture and Agri-Food Canada (AAFC), Canterra Seeds, and the Alberta Wheat Commission (AWC) to support Canada Prairie Spring Red (CPSR) wheat breeding was announced."

Parker goes on to say that "even though it is early days, the predictions we made about UPOV '91 seem to be coming true. New investments are being made, and new collaborative partnerships are forming." Parker firmly believes that "the real beneficiaries will be Canada's farmers; securing access to the newest and most innovative plant varieties, giving them greater choice, and improving their productivity, helping them remain competitive in a global marketplace."

You can still save seed

Under the previous PBR legislation (UPOV '78) producers were always able to save their own seed purchased from certified production, clean it, and grow it for subsequent years. Producers could be held liable if they sold their production to a neighbour or someone else who intended to crop that seed.

This hasn't changed under UPOV '91. You can still grow your own seed, clean it and plant it again in subsequent years. What does change under UPOV '91, however, is that a producer must go to greater effort to maintain records and provide evidence of a certified purchase from previous years. Also, the liability now rests with both the buyer and the seller. It is more important than ever to ensure your own use seed production has a "blue tag" proving your purchase of certified at some point — and keep your tag. Lorne Hadley, executive director of the Canadian Plant Technology Agency (CPTA) recommends keeping your blue tag evidencing your certified purchase for at least seven years, similar to the time you need to keep your tax records for Revenue Canada. That tag is your proof that you are not liable.

In cases when infringement is suspected, the number of people that a breeder or variety owner can investigate has increased under UPOV '91. According to Hadley, "the number of people that can be investigated has increased to the buyer, the seller, the grain dealer, or anyone involved within the chain of events leading to the infringement."

In cases where infringement is proven, Hadley goes on to say that legal issues would be heard in a civil court and if the purchase of illegal seed is proven "the award would be whatever the court decides as lost profit and a multiple of the royalties that the producer should have paid would be awarded to the plaintiff, as well as court fees of both the plaintiff and defendant. The court will apply two to three times the cost of the royalties of what the producer would have paid in the first place if the seed was purchased legitimately." Hadley notes that "nothing changes under UPOV '91 for people who do legitimate business."

The CPTA is currently asking all retailers to inform customers of variety status, if it is patent protected and which UPOV agreement it falls under. A variety can have PBR protection under either the '78 or the '91 UPOV Convention. This is important because the rules are different under the different Conventions. For instance, under UPOV '91 protection, PBR on varieties has increased to 20 years, previously 18 years under UPOV '78.

New for Seed Manitoba 2016

There are many resources available to the producer to determine the status on a particular variety. For many years now this guide has provided the logo for the UPOV '78 legislation beside the variety name. In the 2016 version, we are also including the UPOV '91 logo on those varieties that have received protection under UPOV '91.

CSTA has launched a new tool with assistance from the Canadian Food Inspection Agency's Variety Registration Office (VRO) and the Plant Breeders' Rights (PBR) Office. It's available in the library at <http://cdnseed.org/library/crop-kinds-database/>. The searchable database aims to help all value chain stakeholders easily identify PBR protection on crop varieties registered for sale in Canada. Users can search specifically by crop kind, variety name, and by the type of PBR protection (UPOV 1978 or UPOV 1991).

For more information on UPOV '91 and implications to the retailers, grain buyers and seed growers, go to www.pbrfacts.ca. This website has been developed by the CSTA and provides accurate, up-to-date information on all aspect of the legislation.

High yield & high protein wheat: Using on-farm-tests to achieve both

by John Heard, Manitoba Agriculture, Food and Rural Development Soil Fertility Specialist

M

Manitoba farmers are growing new varieties of spring wheat with very high yield potential, often exceeding 80 bu./ac. and some field yields exceeding 100 bu./ac. These very high yields have brought some challenges in nitrogen management:

- Current nitrogen recommendations for spring wheat serve well for 65 bu./ac. yields, developed with trials conducted from 1989-2004. The economic-based nitrogen rate calculator is posted at: <http://www.gov.mb.ca/agriculture/crops/soil-fertility/nitrogen-rate-calculator.html>.
- Newer high-yielding wheat often produces lower protein, frequently below the thresholds (i.e. 13.5 per cent) that are accepted for milling wheat prices.
- The standard guideline of 2.5 lbs. of soil plus fertilizer N/bu. for milling wheat translates to a 200 lbs. N supply/ac. for 80-bu. crops a very high rate, well exceeding traditional rates. This represents a large financial risk to growers, may lead to excessive lodging and risks of N losses to the environment (i.e. leaching and nitrous oxide emissions).
- Mid-season nitrogen applications may be considered a strategy for meeting yield and protein, but bring their own risks. Mid-season applications are dependent upon timely rainfall to prevent stranding at the soil surface. A method suggested by North Dakota researchers is post-anthesis N (PAN), involving a foliar application of UAN solution (28-0-0) at 30 lbs. N/ac., diluted 50:50 with water, applied approximately one week after flowering. Such applications risk leaf damage and previous research at AAFC Brandon showed little uptake through wheat leaves.

TRADITIONAL SMALL-PLOT RESEARCH TREATMENTS	ON-FARM TEST TREATMENTS
N Rates lb. N/ac. (soil & fertilizer N) Check 100 130 160 190 220	Farmer Base N rate Base N & 30 Base N & 60
N timings 130 Base N & 30 at stem elongation & 60 at stem elongation & 30 at flag leaf & 60 at flag leaf	Farmer Base N rate & PAN

Small-plot research

To address these issues, a combination of small-plot research and field-scale on-farm tests was co-ordinated with individual farmers, ag consultants, ag retailers and government extension and research staff. The strategy was to determine what rates of nitrogen were required to produce both high yield and protein, and whether in-season applications would achieve similar results with less N. Scouting tools such as leaf chlorophyll content, GreenSeeker NDVI, flag leaf N and aerial drones were employed to see if they could help a grower or adviser to decide whether a mid-season application was warranted.

Farmers are increasingly well armed to do field research. Through use of GPS, guidance systems, rate controllers, high-clearance sprayers, yield monitors and scaled grain carts, farmers can apply and collect valuable data. The important components that forge these resources into research is replication, random-

ization and discipline in following a research protocol.

The studies were done at seven research stations and 18 farm fields across Manitoba. Small-plot research allows the testing of multiple treatments, but the number of comparisons that can be done with field-scale strips are simply limited by size of equipment. So on-farm tests focused on either rate (farmers base N rate versus additional 30 lbs. N/ac. versus additional 60 lbs. N/ac.) at seeding or the post-anthesis (PAN) treatment on top of the base N rate. The "farmers base rate N" was the rate they used on the bulk of the field, according to past experience and/or recommendations that they followed. Strips were replicated three or four times depending on the farm co-operator. The table above compares the treatments applied in small-plot and in on-farm tests.

The targeted varieties were AAC Brandon and Prosper. Farmers applied the treatments

on their own using field-scale equipment (e.g. PAN treatment in Figure 1-2). Yields were measured with calibrated yield monitors and/or scaled grain carts (Figure 3).

Observations

After several frustrating years of watching Blue Bomber football, I have learned not to celebrate a victory after the first quarter. Likewise, much of this wheat yield and protein study remains to be played out, so no conclusions yet. But there are some “first-quarter” yield and protein statistics worth reporting.

In general wheat yields were respectable, averaging 71 bu./ac., but were not as high as many of the growers had come to expect based on previous years experience. Conversely, wheat protein levels achieved with Base N rates were good, averaging 14.1 per cent. With spring wheat, a general thumb rule of 13.2 per cent protein indicates nitrogen sufficiency for yield. If protein levels are less than 13.2 per cent, then the N supply was insufficient for the available yield potential that year. This year, only one farm had base N rate protein below this benchmark level.

We can speculate on the conditions that resulted in less-than-expected yields: the late-spring frost and severe lodging of some fields in early July and the high temperatures during flowering. The high protein resulted from these yield levels and some higher base N rates. The highest base N rate was some 170 lbs. N/ac.

The addition of 30 and 60 lbs. N/ac. above the farmers base N rate had no significant impact on yield or protein. The average base N rate yield was 70 bu./ac. with protein of 14.7 per cent, with additional fertilizer only budging up average yield by 2.0 bu./ac. and protein by 0.3 percentage points.

Early July was very hot and humid, and the PAN application caused severe leaf burn on most farms (Figure 4). Most farmers applied the treatment in the evening or early morning and flag leaf area tissue damage averaged 15 per cent, but at one site flag leaf damage was 32 per cent when the application was made in the heat of mid-afternoon. On average the effect on yield was very slight, a 1.7 bu./ac. reduction, but was 6.0 bu./ac. in the severe case noted above.

The PAN treatment increased grain protein some 0.5 percentage points. When base N rates produced lower protein, the increase was significant with a 0.9 to 1.5 per cent protein increase, but when base N levels produced protein above 14 per cent there was little additional benefit.

Stay tuned! Much of this wheat yield and protein story is yet to be played out. More years of such on-farm tests with similar protocols and pooled results will allow development of prob-

Figure 1 and 2.
Post-anthesis N application
(top) and the application
map (left)

Figure 3. Strip harvesting

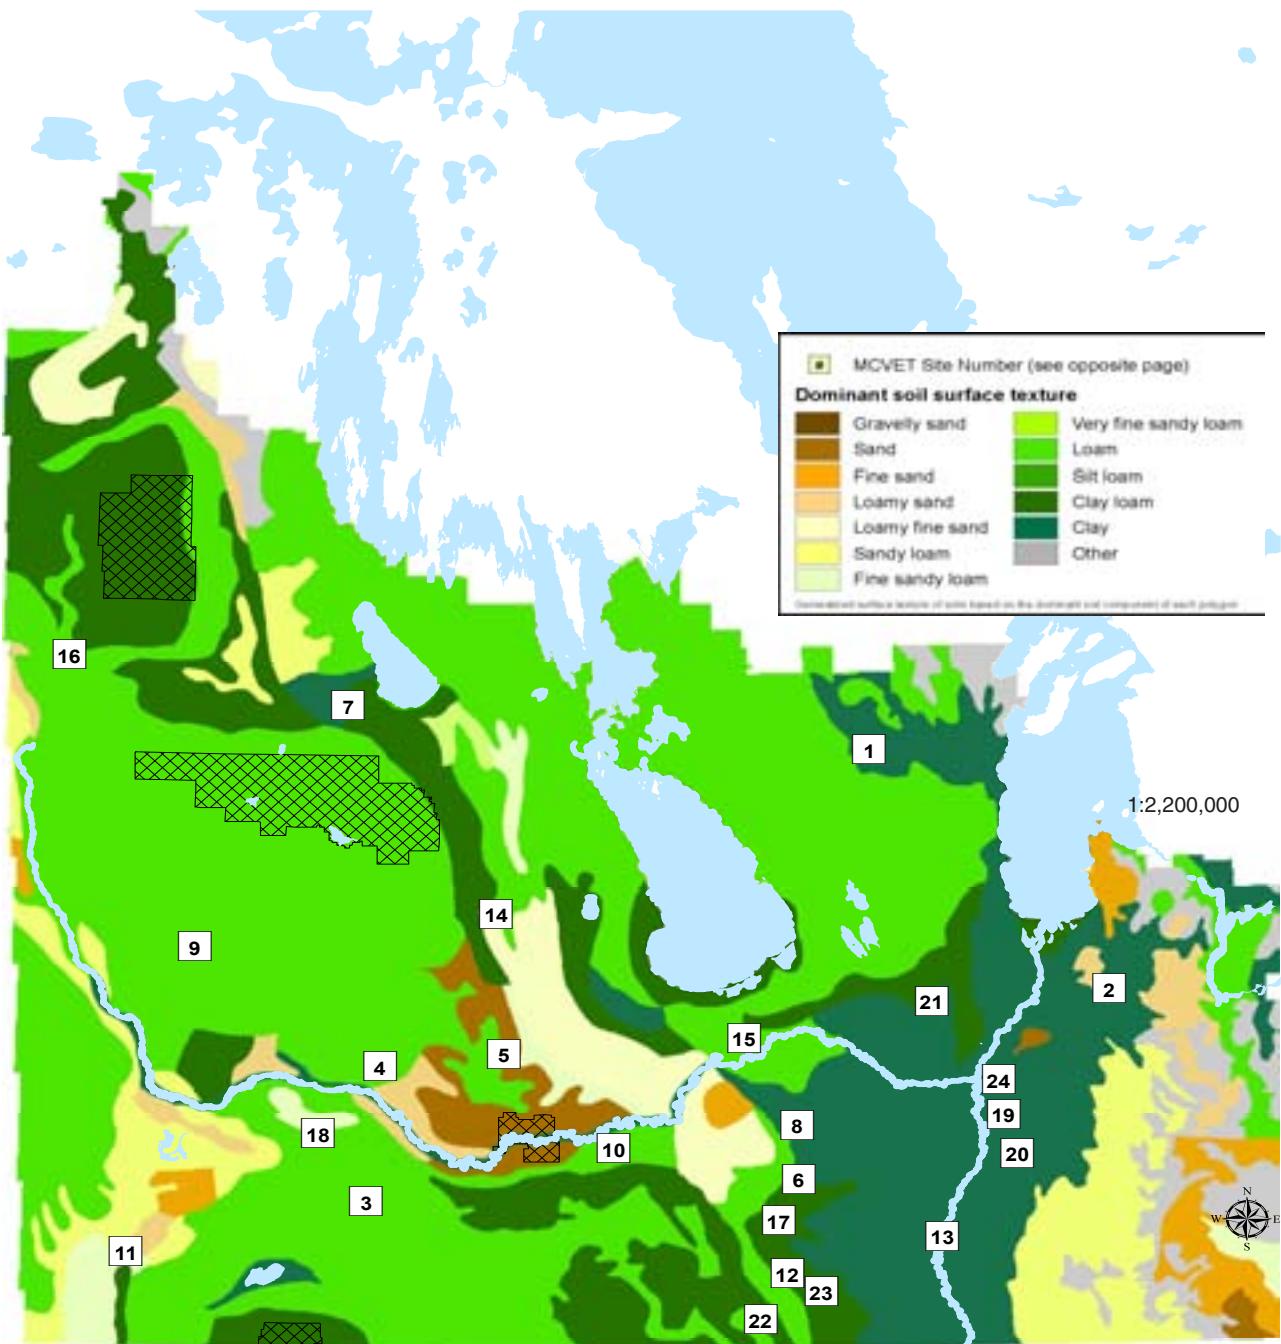

abilities of protein response to such in-season applications.

The Manitoba Wheat and Barley Growers Association will assist in co-ordinating and funding such small-plot and field-scale research in coming years. Other contributors this past year included: farmer co-operators, Richardson (for protein analysis), Farmers Edge Laboratories, KOCH Fertilizers, 5 MAFRD research sites, Portage AAFC and Kelburn Research Farm.

¹ Weather data is reported from May 1st to October 4th and reflects the percentage of the normal accumulations as calculated using the long-term average for the past 30 years.

Seeding and harvest dates for individual trials can be found at the bottom of the Yield Comparisons Tables located in the respective Crop Sections.

As per MCVET, MCC, NSAC and MPGA protocol's, all sites are fertilized at levels to achieve maximum crop performance. Weed control is applied as required to achieve a relatively weed free area. Insecticides are applied as required, while fungicides are not applied to any trials.

Any questions related to the sites found in Seed Manitoba 2016 can be directed to the individuals listed below:

For Canola please contact Anastasia Kubinec at (204) 750-2717 or e-mail anastasia.kubinec@gov.mb.ca.

For Grain Corn, please contact Pam de Rocquigny at (204) 750-1584 or e-mail pamela.dерocquigny@gov.mb.ca

For all remaining crop types, please contact Craig Linde at (204) 841-4712 or e-mail craig.linde@gov.mb.ca

Bragging rights.

(on pre-treated
seed only)*

JumpStart® delivers enhanced phosphate availability for increased root growth and a larger leaf area.

For a canola crop you can be proud of, order your seed pre-treated with JumpStart inoculant. In 163 farmer-conducted trials, canola treated with JumpStart showed an average 6% increased yield over untreated canola**. Quicker start, stronger finish. Don't wait, order your seed pre-treated with JumpStart today.

Nature. It's powerful technology.

JumpStart®

ALWAYS READ AND FOLLOW LABEL DIRECTIONS.

*For pre-treated seed only. Based on the 2016 published SRP of \$49.50 for JumpStart inoculant in a pre-treated bag of canola.
1 bag canola = 10 acres.

**163 independent large-plot trials in Canada between 1994 and 2013. Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.

Variety Description Key

A grey box has been placed at the bottom of each table that displays the Grand Mean for both Yield (bu/acre) and Protein (%) and the corresponding LSD value ($p < 0.05$).

Except for the long term average yield and protein data, variety description information was obtained from the variety registration trials. For Relative Maturity, please keep in mind the actual number of days to reach maturity will depend on local climactic conditions and to some extent on management practices.

Long term yield data is from MVET plots harvested from 2000 to 2015, while protein is from 2002 to 2015. Actual protein will depend on seasonal growing conditions and fertility levels.

"Resistance Level" Disease ratings: R = Resistant; MR = Moderately Resistant; I = Intermediate; MS = Moderately Susceptible; S = Susceptible; " - " = not available

"Resistance Level" Lodging and Sprouting ratings: VG = Very Good; G = Good; F = Fair; P = Poor; VP = Very Poor; " - " = not available.

Site Years Tested is the cumulative number of locations over the years that a variety has been tested. The more site years the more dependable the data.

© Indicates a variety that is protected by Plant Breeder's Rights legislation that complies with UPOV 1978.

◊ Indicates a variety that is protected by, or has been applied for and is pending, Plant Breeder's Rights legislation that complies with UPOV 1991.

Key to 2015 Yield and Protein Tables

Yields derived over 2 or more growing seasons are the best indicator of variety performance. Use single site year data with caution.

Data collected from Portage is not presented as an individual site but data is included in the long term yield and protein columns in the Variety Description table.

CV% = Coefficient of Variation. A measure of random variation in a trial. A low CV is desirable.

LSD (bu/acre) = Least Significant Difference. Varieties must differ by the LSD value ($p < 0.05$) to be considered significantly different from one another.

Sign Diff = Significant Difference. Indicates if a real difference exists between varieties at an individual site.

Malting - 2 Row	TR10214	AAFC - Brandon
Malting - 2 Row	TR12135	Crop Development Centre
Food and Feed - 2 Row	TR11698	Alberta Agriculture and Forestry
Food and Feed - 2 Row	TR12733	Highland Specialty Grains
Food and Feed - 2 Row	TR12735	Highland Specialty Grains
Food and Feed - 2 Row	TR13740	Highland Specialty Grains

Comments:

Seed of the new variety **Canmore** will be commercially available for seeding in Spring 2016.

Malting barley varieties are classified into two groups. The “**Malting: Acceptance - Recommended**” group are varieties with recommended market acceptance as listed in the Canadian Malt Barley Technical Centre (CMBTC) publication “**Recommended Malting Barley Varieties 2016/17**”. The category of “**Malting: Other**” includes varieties not currently recommended by the CMBTC but markets may exist.

Canmore is being evaluated for use in value added end use markets.

The two-row malting varieties **CDC PolarStar** and **CDC PlatinumStar** are available through closed loop, identity preserved programs.

The hulless varieties **CDC Clear** and **Taylor** are malting types.

It is strongly recommended for producers to use a combination of the Canadian Food Inspection Agency's List of Registered Varieties (www.inspection.gc.ca) and the Canadian Grain Commission's Variety Designation Lists (www.grainscanada.gc.ca) to determine the registration and grade eligibility status of varieties.

Forage yields of some varieties are listed in the Forage Crops section of Seed Manitoba 2016.

1 Values in brackets indicate row and type: 2 = two-row; 6 = six-row; B = blue aleurone; W = white aleurone (all others yellow); F = fodder.

2 Reactions given for old races of stem rust. All cultivars are susceptible to new race QCCJ. However, to date this has not caused widespread damage. Early seeding will generally reduce the likelihood of severe infection.

3 Fusarium head blight (FHB) infection is highly influenced by environment and heading date. Under high levels of the disease all varieties will sustain damage. Hulless barley typically has reduced levels of DON when compared to regular barley with similar levels of disease.

STRONG. VIGOROUS. DEPENDABLE.

A HIGH YIELDING, STRONG STRAWED
CWRS WITH BROAD DISEASE RESISTANCE.
CONSISTENT PERFORMANCE
IN ALL ENVIRONMENTS.
HITS THE MARK ON ALL

2016-17 Canadian Malting Barley Technical Centre Recommendations

The following varieties of two-row and six-row malting barley are registered with the Canadian Food Inspection Agency based on good agronomic and industry malting quality evaluations. Since registration these varieties have been pilot scale tested by the CMBTC and all exhibit good malting and brewing properties. In addition to market opportunities, seeding decisions should be based on agronomic considerations and feedback from your grain company representative, local elevator operators or malting companies. The CMBTC and its members recommend that you talk with your local malting barley buyer about opportunities in your area to grow and market two-row and six-row malting barley varieties. Visit CMBTCs website for detailed pilot malting and brewing data. <http://www.cmbtc.com>

Two-Row Varieties

VARIETY	SOURCE ¹	MARKET COMMENTS
CDC Copeland	1	Established Demand
AC Metcalfe	1	Established Demand
Merit 57	2	Limited Demand
Bentley	2	Limited Demand
CDC Meredith	1	Limited Demand
CDC PolarStar	2	Limited Demand
Newdale	4	Limited Demand
AAC Synergy	5	Under Commercial Market Development – Growing Demand
CDC Kindersley	1	Under Commercial Market Development – Growing Demand

Some two-row varieties are exclusively or primarily handled by one company and as a result it is recommended that producers consult with their grain company representative, local elevator operators or malting companies regarding commercial opportunities for specific varieties. For Bentley contracting opportunities contact Canada Malting Company. For CDC PolarStar contracting opportunities contact Prairie Malt-Cargill. For Merit 57 contracting opportunities contact BARI-Canada. For Newdale contracting opportunities, contact Canada Malting Company or North American Food Ingredients.

Six-Row Varieties

VARIETY	SOURCE ¹	MARKET COMMENTS
Legacy	3,4	Limited Demand
Tradition	4	Limited Demand
Celebration	2	Limited Demand

Demand for six-row malting barley has been declining and it is recommended that producers consult with their grain company representative, local elevator operators or malting companies regarding commercial opportunities for specific varieties.

1 The following companies have pedigreed seed distribution rights for those varieties that are footnoted:

1-SeCan; 2 - CANTERRA SEEDS; 3 - Crop Production Services; 4 - FP Genetics; 5 - Syngenta

CMBTC Members: Prairie Malt-Cargill, Public Barley Breeders, Richardson International, Viterra, Canadian Grain Commission, ADM-Benson Quinn, Manitoba Liquor & Lotteries, Molson Coors, SeCan, Syngenta, Tsingtao Brewery, Alberta Barley Commission, CANTERRA SEEDS, Farmery Estate Brewery, Hailar MDL Beer Material, Alberta Agriculture and Rural Development, Manitoba Agriculture, Food and Rural Development, New Glarus Brewing, North American Food Ingredients, Saskatchewan Ministry of Agriculture, FP Genetics, Integrated Grain, Saskatchewan Barley Development Commission and G3 Canada Limited.

Other organizations providing input to this list: The Brewing & Malting Barley Research Institute and BARI-Canada."

In the heart of Manitoba

Make your foresight 20/20, and let our analysts see what you can't see that's lurking on your seed. In the case of seed, you cannot afford to let the unknown go unattended.

OATS

New for 2016

Variety	Code	Breeder	Distributor	Seed Availability
AAC Nicolas®	OA1331-5	AAFC - Ottawa	SeCan	2017
Akina®	CFA1112	Lantmännen SW Seed AB	La Coop Federee	—
CDC Norseman®	OT3066	Crop Development Centre	SeCan	2018
Kara®	CFA1102	Lantmännen SW Seed AB	La Coop Federee	—

Comments:

Seed of the new variety **CS Camden®** will be commercially available for seeding in Spring 2016.

There have been recent changes within the crown rust pathogen populations in Manitoba that has seen virulence developed on a number of oat varieties. Varieties that contain the *Pc91* gene, including **AAC Justice®**, **CDC Morrison®**, **HiFi®**, **Souris®** and **Stainless®**, have been redefined for crown rust resistance.

The variety **Summit®**, which is postulated to carry different resistance genes, is also losing its resistance to virulent races in the Eastern Prairies; therefore, it has been redefined for crown rust resistance.

Producers are encouraged to check the "Preferred" or "Approved" lists available at most mills if they are selecting varieties for the milling market. These lists are updated as new genetics become available.

HiFi® and **CDC Morrison®** are exceptionally high in beta-glucan fibre and is available for contract identity preserved production.

The variety **Stride®** appears to have improved resistance to Fusarium Head Blight, based on lower DON accumulation, in comparison with other recently registered varieties.

The variety **CDC Haymaker®** is a forage oat variety. Forage yields of some oat varieties are listed in the Forage Crops section.

GRAND MEAN (bu/acre)		139											
LSD (bu/acre) (0.05)		9											

1 The letter 'F' indicates a forage type.

2 All varieties are susceptible to new races NA67 and NA76 and these races caused moderate damage to crops in the Red River Valley in 2001 and 2002. Early seeding will generally reduce the likelihood of severe infection.

3 BYD = Barley Yellow Dwarf - a viral disease carried and spread by aphids - early seeding will generally reduce the likelihood of severe infection.

HULLESS OATS**Comments:**

Hulless oats were last tested in 2008.

GEHL® is the first bald hulless oat variety as it does not have surface-borne hairs (trichomes). **GEHL®** also has improved hulless expression.

The yield of hulless oats is less than that of common oats in which the hull is part of the yield. Hulless oats should be stored at <12% moisture.

Hulless oats are a specialty product for which a market should be ensured prior to planting.

Comments:

Seed of the new Canada Western Red Spring (CWRS) varieties **AAC Connery®**, **CDC Titanium VB®** and **5605HR CL®**, Canada Prairie Spring Red (CPSR) varieties **ACC Foray VB®** and **AAC Penhold®**, and Canada Western Interim Wheat (CWIW) variety **Elgin ND®** will be commercially available for seeding in Spring 2016.

The variety **AAC Tradition** was selected for performance under organic growing conditions. The Canadian Grain Commission has yet to designate **AAC Tradition** to a wheat class.

Midge tolerant varieties are designated by the letters 'VB', which stands for Varietal Blend. The varieties contain the *Sm1* gene for tolerance. To manage against the build-up of midge resistance to the gene, an interspersed refuge is used commercially. More information on midge tolerant wheat varieties and interspersed refuge can be found at www.midgetolerantwheat.ca.

Most varieties have been rated for their relative resistance to pre-harvest sprouting. Under wet postmaturity conditions varieties rated poor (P) would have reduced ability to retain Hagberg Falling Number values relative to those rated good (G) or very good (VG).

As of August 1, 2015, an interim wheat class named the Canada Western Interim Wheat (CWIW) is in effect for the varieties **Faller**, **Prosper** and **Elgin ND®**. The three varieties have been granted interim regional registrations from the Canadian Food Inspection Agency (CFIA), expiring in 2018.

At Seed Manitoba 2016 publication deadlines, the Canadian Grain Commission (CGC) has stated effective August 1, 2018, twenty-five (25) spring wheat varieties from the Canada Western Red Spring (CWRS) and four (4) varieties from the Canada Prairie Spring Red (CPSR) class will be designated to another yet-undetermined class. Varieties published in Seed Manitoba 2016 that will be impacted include the CWRS varieties **5603HR®**, **Alvena®**, **Harvest®**, **KANE®**, **Unity VB®** and the CPSR variety **Conquer VB®**.

Producers are strongly encouraged to use the Canadian Grain Commision's **Variety Designation Lists** (www.grainscanada.gc.ca) that indicate the varieties belonging to each class of wheat in Canada, and the complete list of varieties being designated to another class effective August 1, 2017.

For complete and up-to-date information on the Canadian Wheat Class Modernization initiative, visit CGC's website at <https://www.grainscanada.gc.ca/consultations/2015/classes-en.htm>.

It is also recommended for producers to use the Canadian Food Inspection Agency's **List of Registered Varieties** (www.inspection.gc.ca) to determine registration status of varieties.

STRENGTH IN NUMBERS.

The cutting-edge quality of CANTERRA SEEDS pedigreed seed is rivalled by only one thing – our vast selection. Our portfolio strengthens each year as new varieties are added from our deep product pipeline. This is quality in quantity, catered specifically to you.

Available only at select retailers.

1 Leaf Spots rating is a combination of resistance to tan spot, spot blotch and septoria leaf disease complex.

2 Fusarium head blight (FHB) infection is highly influenced by environment and heading date. Under high levels of the disease all varieties will sustain damage.

DURUM WHEAT

New for 2016

Variety	Code	Breeder	Distributor	Seed Availability
AAC Congress®	DT856	AAFC - Swift Current	CANTERRA SEEDS	2018
CDC Alloy®	DT579	Crop Development Centre	FP Genetics	2018
CDC Dynamic®	DT578	Crop Development Centre	CPS Canada Inc.	—
CDC Precision®	DT577	Crop Development Centre	Alliance Seed	—

Comments:

Seed of the new varieties **CDC Fortitude®**, **AAC Marchwell VB®** and **CDC Vivid®** will be commercially available for seeding in Spring 2016.

The varieties **AAC Raymore®**, **CDC Fortitude®** and **AAC Cabri®** have solid stem with resistance to the wheat stem sawfly.

Midge tolerant varieties are designated by the letters 'VB', which stands for Varietal Blend. The varieties contain the *Sm1* gene for tolerance. To manage against the build-up of midge resistance to the gene, an interspersed refuge is used commercially. More information on midge tolerant wheat varieties and interspersed refuge can be found at www.midgetolerantwheat.ca

1 Leaf Spots rating is a combination of resistance to tan spot, spot blotch and septoria leaf disease complex.

2 Fusarium head blight (FHB) infection is highly influenced by environment and heading date. Under high levels of the disease all varieties will sustain damage.

WINTER WHEAT

New for 2016

Variety	Class	Code	Breeder	Distributor	Seed Availability
AAC Elevate®	CWRW	W495	AAFC - Lethbridge	SeCan	2017

Varieties that have been supported for registration with class to be determined by the Canadian Grain Commission

1303-132-1 Department of Plant Sciences, U of M

Comments:

Accipiter, **Broadview**, **CDC Falcon**, **CDC Harrier**, **CDC Raptor**, **Peregrine** and **Swainson** are hard red kernel types, **Sunrise** is a soft red kernel type, and **CDC Ptarmigan** is a soft white kernel type.

The variety **Emerson** is rated Resistant (R) to Fusarium Head Blight. Depending on the level of disease pressure, varieties that are rated as Resistant will be infected to some degree. If disease pressure is high, yield and/or quality loss due to FHB can still occur in R-rated varieties.

The variety AAC Elevate® has resistance to the wheat curl mite, the vector that transmits wheat streak mosaic virus.

GRAND MEAN (bu/acre)													
LSD (bu/acre) (0.05)													

1 Maturity ratings: E = Early, M = Medium and L = Late. CDC Falcon is considered an Early (E) maturing variety. Varieties plus 2 to 4 days compared to CDC Falcon would be Medium (M) maturing. Varieties greater than 4 days compared to CDC Falcon would be rated as Late (L) maturing.

2 Winter wheat varieties generally have poor genetic resistance to fusarium head blight. Earlier flowering of winter wheat relative to spring wheat may allow winter wheat to escape infection. The ratings provided are based on data from the Co-operative Registration Trials and/or performance in commercial fields.

3 All registered varieties have similar (good) winter hardiness if seeded at the optimum date into standing stubble where good snow cover can be assured. For the newer varieties, there is limited information currently available. As these varieties are grown on more acres, a better understanding of relative winter hardiness will follow.

The Manitoba seed industry lost a great friend and innovator this fall with the passing of John Mclean Smith. John had a deep love for farming and the seed business and was always nudging us forward with his gentle, persuasive manner. Front and center was John's desire to create opportunity for his fellow seed growers and farmers through the introduction of top performing cereal seed varieties.

John will also be remembered for his love of family, community and those less fortunate. His warmth and laughter, his wisdom and his deep abiding strength of character will be sorely missed by all who knew him.

John Smith (left), Walt Smith (middle) and Thomas Thiessen (right).

Submitted by a colleague

Cardale Performance on our Farm

- Our top yielding wheat last two years
- Cardale 79.5 Bus/A on 494 Acres in 2014
- Outyielded our Brandon and CDC Go

"We left our Cardale to harvest last...still Cardale did not sprout or shatter and kept its colour!"

Lucas and Ulrich Menold

RED SPRING WHEAT

SPRING VARIETIES AVAILABLE – RED SPRING

AAC Brandon

A cross between Superb & CDC Osler, highest yielder on our farm good protein, short strong straw, resistance to leaf, stem & stripe rust, and smut. (MR rating to FHB). * Highest yielder on our farm

CDC GO

Short Strong Straw, Very High Yielder, Good Protein

AC Carberry

Short, High Yielder

OATS

AC Stride

High test weight & yield, high protein, resistance to smut, and most races of crown rust.

WINTER WHEAT

AC Flourish

Short Strong Straw, Eligible for Select Class Higher protein then Falcon

Moats

Out yields Buteo Height and Lodging similar to Buteo

There is NO Plan A

**MIDGE
TOLERANT
WHEAT**
Plant • Protect • Preserve

Midge tolerant wheat protects your crop against devastating pest damage, but it's up to you to protect the technology. The Stewardship Agreement limits the use of farm-saved seed to one generation past Certified seed. It's a simple step that keeps the interspersed refuge system at the proper level, preventing build-up of resistant midge. Without the refuge, we risk losing the one and only tolerant gene. There is no plan B.

Protect this important tool. Plan for high yields and quality grades for years to come. Contact your retailer or visit www.midgetolerantwheat.ca.

Manitoba Farmers: Up until now we've had to choose ... between a short winter wheat with fusarium or a tall variety without fusarium. Now we have Gateway... short and strong without the fus!

Thank you for considering Gateway for a portion of your 2016 winter wheat acres.

Walt Smith

Nodulator® PRO

The professional Biostacked® Inoculant system

Nodulator® PRO with Integral® biofungicide is the only preinoculant system that's Biostacked®. It has a more active strain of rhizobium, and thanks to the benefits of Integral, it delivers suppression of fusarium and rhizoctonia¹. Nodulator PRO also offers a very low application volume and 60 day on-seed survival. It even helps deliver at the end of the season with up to 6% more yield² than the competition. So why not "Biostack" the odds in your favour? Visit agsolutions.ca/nodulatorpro or contact AgSolutions® Customer Care at 1-877-371-BASF (2273) for more info.

We create chemistry

¹ Biological fungicide activity is a PMRA registered claim in Canada. ² Source: BASF, 76 Station Years (n sites x n years)

Always read and follow label directions.

AgSolutions, BIOSTACKED, and INTEGRAL are registered trade-marks of BASF Corporation; is a registered trade-mark of Becker Underwood Canada Ltd.; all used with permission by BASF Canada Inc. © 2015 BASF Canada Inc.

Variety Description Key

A "CHECK CHARACTERISTICS" is at the bottom of each table for mustard, soybean and sunflower to display the long term yield, # of site years, maturity and any other check attributes.

The grey box has been placed at the bottom of each table for canola and flax displaying the "GRAND MEAN" for Yield (bu/acre) and the corresponding LSD value ($p < 0.05$).

Except for the long term average yield, variety description information was obtained from the Co-operative Registration Trials. For Relative Maturity, actual number of days will depend on local climatic conditions and to some extent on management practices.

"Resistance Level" ratings: HS = highly susceptible; S = susceptible; MS = moderately susceptible; MR = moderately resistant; R = resistant; '-' = not available.

Site Years Tested is the cumulative number of locations over the years that a variety has been tested against the check variety.

© Indicates a variety that is protected by Plant Breeder's Rights legislation that complies with UPOV 1978.

◊ Indicates a variety that is protected by, or has been applied for and is pending, Plant Breeder's Rights legislation that complies with UPOV 1991.

Key to 2016 Yield Tables

CV % = Coefficient of Variation. A measure of random variation in a trial. A low CV is desirable.

LSD = Least Significant Difference. Varieties must differ by the LSD to be considered significantly different from one another.

Sign Diff = Significant Difference. Indicates if a real difference exists between varieties at an individual site.

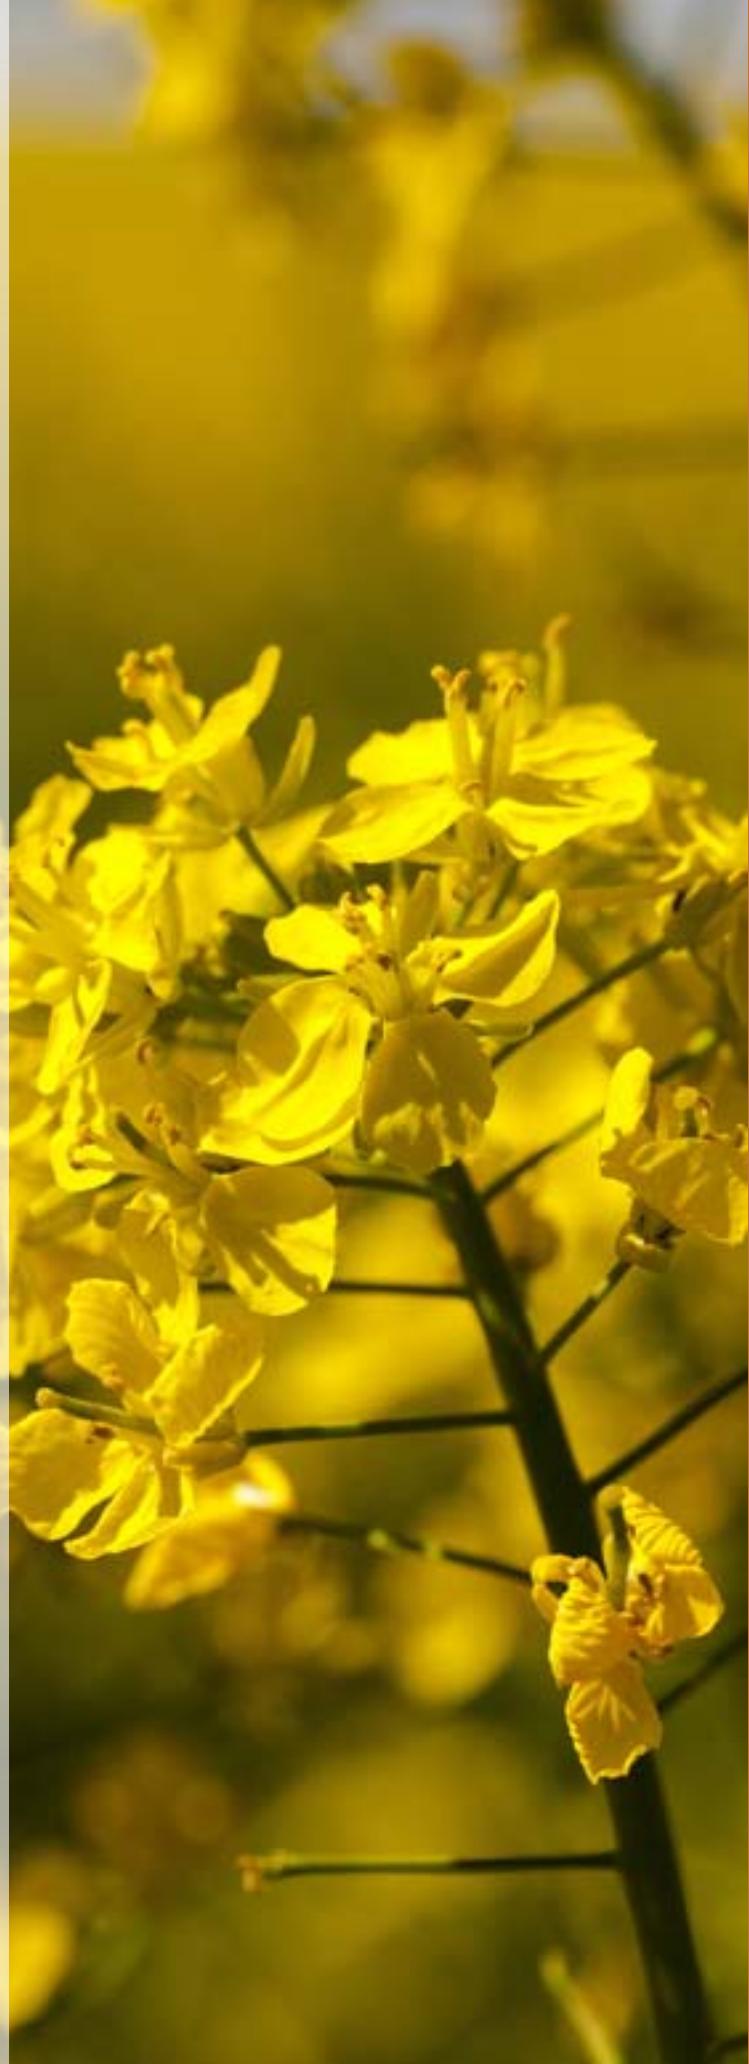

Canola Comments

For specific notes regarding the canola tables, refer to the CANOLA COMMENTS at the top of page 49.

Soybean Comments

For specific notes regarding the soybean tables, refer to the SOYBEAN COMMENTS at the top of page 58.

Oilseed Crops

The miracles of science™

BETTER START. BETTER HARVEST.

Bright golden yellow as far as the eye can see. Now that's the mark of a truly successful canola crop. But when you plant with seeds treated with Lumiderm™, you'll see the benefits of flea beetle and cutworm protection long before the first hints of yellow begin to grace your fields. That's because Lumiderm™ helps get your crop off to a better start. And a better start means a better harvest.

**Ask your seed supplier to include Lumiderm™ on your 2016 canola seed order.
Visit lumiderm.dupont.ca.**

**DuPont™
Lumiderm™**
insecticide seed treatment

DuPont™ Lumiderm™ is a DuPont™ Lumigen™ seed sense product.
As with all crop protection products, read and follow label instructions carefully.

Canola Comments

The Variety Descriptions table summarizes the performance of canola varieties tested in 2015 through the post-registration Canola Performance Trial (CPT).

The CPT information provides data which has been audited by field inspection and data analysis process. The data presented was collected based on a specific scientifically designed protocol to ensure comparisons are unbiased. Detailed notes on other variety attributes and trial management are at [www.canolaperformance trials.ca](http://canolaperformance trials.ca)

Performance at individual locations can be compared within the HT group and between groups, but the best performance indicator is to compare varieties over multiple sites. The trial design included grouping by herbicide tolerance so the LSD (Least Significant Differences) has been included for each HT group to determine if yield difference between varieties are significant. Using the comparisons of the yield performance to the standard 5440, comparisons can be made between HT groups and between small plot and field scale trials.

Data Sources:

Data presentation in the long and mid season canola growing zones trials table (page 52) was collected from small plot/replicated trials that are typically less than ¼ acre in size. Varieties have been entered by the representative marketing company for testing.

Blackleg Rating for Canola

The rating represents a variety's blackleg tolerance relative to the susceptible variety Westar. Varieties with a resistant (R) or moderately resistant (MR) rating for blackleg have shown the greatest ability to suppress blackleg, but can still develop some lesions or cankers. Individual field performance and tolerance may vary from tolerance levels reported in the registration trials. In fields showing higher than expected levels of blackleg or where there has been history of a tight rotation with canola, it may be necessary to lengthen rotation to achieve sufficient blackleg control.

Cash Flow Solutions For Your Farm

Boost your marketing plan and lower your financing costs with a cash advance.

Whether you're just getting started or have been farming for years, a cash advance offers solutions for your farm, including:

- **financial flexibility**, so you can market your crop or livestock when the timing and price is best for you,
- a **low blended interest rate**, so you can lower your cost of production, and
- cash flow solutions for the everyday challenges of managing a farm.

Applying is easier than ever too, with all your advance needs in one place at CCGA. Fall advances for livestock and stored grains are available now.

Find out more at **1-866-745-2256**
or www.ccg.ca.ca.

The cash advance program administered by CCGA is made available to Canadian farmers through Agriculture and Agri-Food Canada's Advance Payments Program.

CANOLA (continued)

Clubroot Resistant Varieties (information from <http://archive.canola-council.org/clubroot/>)

Clubroot (*Plamodioiphora brassicae*) is a disease of canola, which is long-lived in soil and is difficult to manage once it becomes established. Clubroot has been found at very low concentrations in Manitoba canola fields.

Clubroot resistant varieties are available for planting with resistance to the predominant pathotypes, but are not immune to the disease. With continued use, selection pressure for other clubroot pathotypes may occur that cannot be controlled by varietal resistance. To maintain genetic tools for the long-term, proper crop rotations and agronomic practices are needed.

Current varieties - Bayer CropScience: L135 C, L241C; Brett Young: 6056CR, 6076CR; CANTERRA Seeds: 1960, CS2000; Cargill: V12-3; Crop Production Services: VR 9558 GC, VR 6562 GC, PV 580 GC; DeKalb: 74-47 CR, 74-54 RR, 75-57 CR; Dow AgroSciences: 1020 RR, 2020 CL; DuPont: D3152, D3155C; Pioneer Hi-Bred: 45H29, 45H33; Syngenta: SY4105

READY FOR ANYTHING.

There's no way to know what Mother Nature is going to throw at you, but there is a way to be ready for it.

With built-in technology that helps you tackle tough weeds in tough conditions, Genuity® Roundup Ready® canola can be the most valuable tool in your field. It's the foundation for a family of high-yielding canola hybrids that offer diverse disease resistance and enable progressive farming practices such as straight cutting. You can't anticipate everything, but you can prepare for anything.

Get ready for next season; talk to your retailer about booking Genuity Roundup Ready canola for 2016.

ALWAYS FOLLOW GRAIN MARKETING AND ALL OTHER STEWARDSHIP PRACTICES AND PESTICIDE LABEL DIRECTIONS. Details of these requirements can be found in the Trait Stewardship Responsibilities Notice to Farmers printed in this publication. ©2015 Monsanto Canada, Inc.

Your land. Your genetics.

On 60,000 farms and 20 million acres across Canada, the name SeCan is trusted for exceptional seed value.

Canadian farmers plant SeCan genetics on more acres than any other seed brand. SeCan is not a seed company. As "Canada's Seed Partner", we're a not-for-profit member association that has returned more than 90 million dollars to Canadian plant breeders.

www.secan.com

This is *your* land. And these are *your* genetics.

Call your SeCan seed retailer for genes that fit *your* farm.

SeCan. Genes that fit your farm®.

Comments:

All variety descriptions other than yield are based on data from the Flax Cooperative Trials in the Prairie Provinces

AC Emerson demonstrates the greatest tolerance to flax chlorosis.

All varieties are immune to rust.

The Canadian Grains Commission advises that the oilseed flax variety **CDC Arras, Flanders** and **Somme** deregistered effective August 1, 2017.

¹ Oil quality of flax is based on the amount of linolenic acid measured in the seed or as measured by iodine value which is calculated from the fatty acid composition of the seed. A higher iodine value and/or higher ALA content indicates a higher overall oil quality in the seed.

² E = Excellent; VG = Very Good; G = Good; FG = Fair to Good; F = Fair; PF = Poor to Fair; P = Poor.

The Cereal Seed Experts

FP Genetics is owned by over 150 seedsmen who know and grow our industry-leading cereal varieties. Although these varieties will evolve, one thing will never change—our commitment to bringing the best cereal varieties to Western Canadian growers.

MUSTARD

Comments:

All varieties are rated resistant tolerance to blackleg.

Data from the 1999-2012 Co-operative Mustard Test and has been approved for publication by the Prairie Recommending Committee for Oilseeds (PRCO).

¹ Mucilage in yellow mustard is a measurement of viscosity of aqueous extracts from seed.

² Volatile oil = allyl glucosinolate

³ Data from 2008-2012 Co-operative Mustard Test

You're not just buying seed, you're investing in your business.

Choosing the right product is only part of your success. You know that knowledge and experience are what help businesses grow. Richardson Pioneer Ag Business Centres give you access to more than today's best seeds. We're here to help you increase your yields and profitability with expert advice and end-to-end service.

From crop planning to grain marketing, we're focused on supporting you at every stage of growth. Get more than top varieties. Partner with a prairie-wide network of agronomic advisors committed to giving your operation the advantage it deserves.

Book Your 2016 Seed Today.

SOYBEANS

NOTES FOR ALL SOYBEAN TABLES

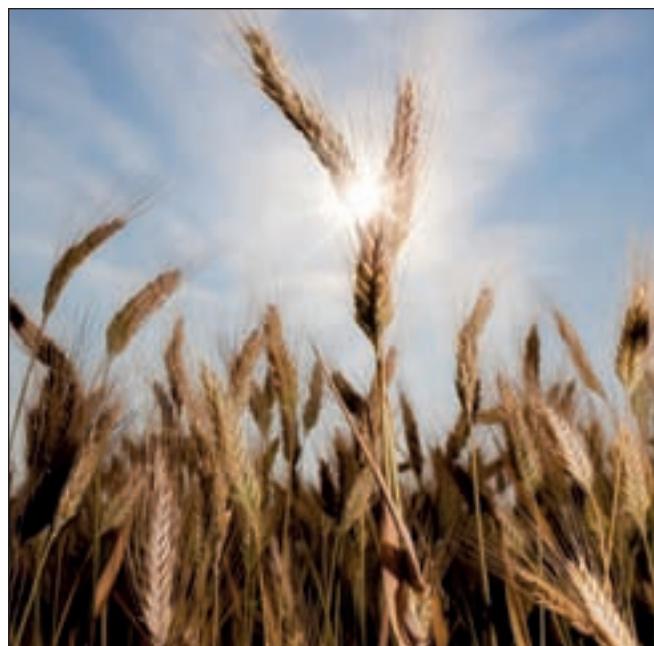

Maturity Notes: Always Use More Than 1 Criteria to Evaluate Maturity.

- O
I
L
S
E
D

C
R
O
P
S
- 1 Soybean varieties have been organized into 3 maturity zones - short, mid and long season areas. Although there are no variety restrictions, the short season grouping is meant to be a starting point for new growers in the outer production areas. The long season group is targeted for southern Manitoba, generally south of Highway 23, with the mid season grouping making up the bulk of the production area in between the short and long season area.
 - 2 Maturity grouping is a ranking of maturity provided by seed suppliers. These rankings are assigned to varieties to assist growers to select varieties suited for their area.
 - 3 Relative days to maturity (dtm) is the number of days from seeding to plant maturity (95% of the pods on the plant are mature with seeds rattling in the pods when plant is shaken) and is expressed as + or - days from the check. Growers need to be cautious when using only one year data when evaluating maturity and yield. Using multiple year maturity data when available will give you a better indication on how a variety will mature with different growing seasons. Actual days to maturity for the check is found in the grey "Check Characteristics" Box at the bottom of the table.

General Notes:

- 1 Roundup Ready and Conventional soybean varieties are evaluated separately, meaning direct comparison of varieties between different tables is not possible. All trials are solid seeded at 210,000 seeds/acre.
- 2 Hilum colour can range from Yellow (Y), Imperfect Yellow (IY), Grey (G), Brown (BR), Buff (BF), Tan(TN) Imperfect Black (IB) or Black (BL) and is solely a marketing issue. The hilum is the point on the soybean seed where it attaches to the pod.
- 3 Relative Seeds/lb, these were the seed numbers of the varieties entered into the trial. Soybean seed size can vary greatly between varieties and even from seed lot to seed lot of the same variety. Growers should use the seed size for their seed lot when calculating seeding rates.
- 4 Lodging is rated at harvest; 1=standing upright, 5= flat along the ground. A rating of 3 or more can promote white mold within the crop canopy.
- 5 Iron Deficiency Chlorosis (IDC) rating scores 1=green leaves, 2=yellowish leaves, 3=green veins with yellow leaves, 4=brown dead tissue between green veins, 5=severe chlorosis and a stunted growing point. Ratings were taken from 4 sites prone to iron chlorosis over the last 2 years. IDC tolerant varieties are varieties with lower IDC Scores and perform better on soils prone to iron deficiency.
- 6 Iron Deficiency Chlorosis (IDC) grouping is used because varieties will have different visual rating scores from year to year. Numerical ratings which are close but are in different groupings will show similar symptoms. Both numerical and groupings should be considered together when judging IDC. Tolerant=leaves stayed green, Semi Tolerant=leaves when yellow then turned green, Susceptible= leaves went chlorotic and had dead patches on their leaves and were often stunted.

Growing wiser.

Seed Manitoba gets you started.

Seed Interactive takes you to the next level

Seed Manitoba is your trusted source for variety selection in this province. Seed Interactive lets you tailor the results for your farm.

Use Seed Interactive to Your Advantage

- Select the locations and years that best compare with your farm
- Choose your own check
- Compare the varieties you want to compare

With Seed Interactive, you can compare multiple varieties, multiple years and multiple locations. It's easy and informative.

Log on to customize selections for your farm.

SUNFLOWERS - NON-OIL TYPE

Sunflower Comments:

These varieties were tested and data donated by the National Sunflower Association of Canada Inc.

Yield %Check, Days to Maturity, Height, Seed Sizing and Oil Content are based on long-term data indicated by 'site years'.

Disease Management:

All sunflowers currently available are susceptible to sclerotinia and all varieties presented in SEED MANITOBA 2016 have shown susceptibility to the sunflower rust strains present in Manitoba. Environmental conditions, presence of inoculum from previously infected crops will increase risk of disease development.

Rust and sclerotinia infection can reduce yield, test weight and can cause grading factor issues.

Genetic resistance to verticillium wilt is rated as moderately susceptible to moderately resistant for all sunflower varieties presented. Again, lengthened crop rotations between sunflower crops will reduce the inoculum in the soil and reduce potential for infection.

ATTENTION CANADIAN CUSTOMERS

Take advantage of the strong export dollar and your U.S. selling power

- We hold three regularly scheduled equipment & truck auctions in nearby Grand Forks, ND each year, in addition to numerous on-farm single seller events annually
- Major auctions offer simulcast online bidding and most units move easily across the border
- We have qualified experience in handling large Canadian equipment packages
- We have enjoyed many strong relationships with Canadian sellers and buyers alike and welcome your future business

**TO BUY OR SELL EQUIPMENT OR TO JOIN OUR DIRECT MAIL PROGRAM

How can my farm benefit from Seed Interactive?

There are five or six **MCVET** sites in the southwest.

How can I generate an **oat yield performance chart** using only those sites to customize data for my farm near Souris?

SEED Interactive Advantage:

Select the locations and years that best compare with your farm.

Seed Interactive allows you to select varieties suited to the agronomic and management practices on your farm. Use the **Variety Characteristics Report** to generate an overall summary using all data, or to compare disease resistance and general agronomic performance.

Use the **Yield Comparison Report** to compare two varieties at the same location. With both reports, choose your own check variety. It's easy and informative. Log on to customize selections for your farm. www.seedinteractive.ca

A Manitoba Crop
Variety Decision Tool

Variety Description Key

A "CHECK CHARACTERISTICS" box has been placed at the bottom of each table for fababean, field beans and lentil to display the long term yield, # of site years, maturity and any other check attributes.

The grey box has been placed at the bottom of field peas displaying the "GRAND MEAN" for Yield (bu/acre) and the corresponding LSD value ($p < 0.05$).

Except for the long term average yield, variety description information was obtained from the Co-operative Registration Trials. For Relative Maturity, please keep in mind the actual number of days to reach maturity will depend on local climactic conditions and to some extent on management practices.

"Resistance Level" ratings: VG = Very Good; G = Good; F = Fair; P = Poor; VP = Very Poor; "n/a" = not available

Site Years Tested is the cumulative number of locations over the years that a variety has been tested against the check variety. The more site years, the more dependable the data.

Ⓐ Indicates a variety that is protected by Plant Breeder's Rights legislation that complies with UPOV 1978.

Ⓑ Indicates a variety that is protected by, or has been applied for and is pending, Plant Breeder's Rights legislation that complies with UPOV 1991.

TKW (Thousand Kernel Weight) is the weight in grams of 1000 seeds.

Key to 2015 Yield Tables

Yields derived over 2 or more growing seasons are the best indicator of variety performance. For new varieties, the average yield over all sites is more reliable than data from a single location. Use single site year data with caution.

CV % = Coefficient of Variation. A measure of random variation in a trial. A low CV is desirable.

LSD = Least Significant Difference. Varieties must differ by the LSD to be considered significantly different from one another.

Sign Diff = Significant Difference. Indicates if a real difference exists between varieties at an individual site.

Pulse Crops

NEW ARRIVALS IN SEED TREATMENT

Nipsit SUITE

INTRODUCING COMPLETE
SEED AND SEEDLING PROTECTION
FOR CEREALS

Both a fungicide and insecticide, **Nipsit™ SUITE** is an all-in-one seed treatment. It provides effective protection against the most common pests and diseases. It's a superior, easy-to-apply formulation that stays on the seed to give it the best possible start.

INTEGO Solo

THE ONLY REGISTERED
SOLUTION FOR APHANOMYCES
IN PULSE CROPS

NEW **INTEGO™ Solo** is your best defense against Aphanomyces – a root rot that's devastating peas in Western Canada. Also registered for pythium control and suppression of seed rot in lentils, chickpeas, dry beans and soybeans – it ensures a bright future for your pulse crops.

Ask your local retailer for more information.

Grow a better tomorrow.

Manitoba Agriculture, Food and Rural Development Variety Guide

FABABEANS

Comments:

The fababean variety trial was tested by MCVET and partially sponsored by the Manitoba Pulse & Soybean Growers

Traditionally tannin fababean with tan coloured seed coats and coloured flowers contain tannins and can't be fed directly to livestock.

Zero tannin fababeans have white seed coats and flowers and can be fed directly to livestock.

Variety Descriptions

Class/Variety	Yield (lb/ac)	Site Years Tested	Seed Size TKW (g)	Maturity * (days)	2015 Yield % Check Variety Arborg

FIELD BEANS — Western Manitoba Adaptation Trials (formerly called Narrow Row trials)

Comments:

Long term yield data and days to maturity are from Manitoba Pulse Growers Association Trials grown in 10 to 12 inch row spacing.

More detailed measurements from the trials are available to MPGA members and will be distributed in the December Special Edition of the Pulse Beat magazine.

Days to maturity is critical. Do not select a variety that will not mature in time, under normal growing conditions. Early fall frost severely affects yield and quality.

1 Long term Average Yield is the best indicator of variety performance. Use single site-year data with caution.

2 Due to different weather conditions each year, the actual number of days it takes a variety to fully mature varies from year to year. Choosing a variety that needs a longer growing season than your farm has, increases your risk of frost damage and lower returns.

Comments:

The lentil variety trial is coordinated with the Saskatchewan Regional Variety testing program, therefore the seed source are same as used in Saskatchewan trials.

The lentil variety trial was tested by MCVET and partially sponsored by the Manitoba Pulse & Soybean Growers

Clearfield lentils are tolerant to the herbicide Odyssey. These varieties are easily identified by the "CL" designation at the end of the name.

Variety Description Key

A "CHECK CHARACTERISTICS" box has been placed at the bottom of each table to display the long term yield, number of site years and any other check attributes information.

Except for the long term average yield, variety description information for canary seed and buckwheat was obtained from the Co-operative Registration Trials.

Site Years Tested is the cumulative number of locations over the years that a variety has been tested against the check. The more site years the more dependable the data.

Ⓐ Indicates a variety that is protected by Plant Breeder's Rights legislation that complies with UPOV 1978.

Ⓑ Indicates a variety that is protected by, or has been applied for and is pending, Plant Breeder's Rights legislation that complies with UPOV 1991.

The Canadian Seed Trade Association (CSTA) has launched the new Crop Varieties Registered in Canada and Plant Breeders' Rights Status database to assist seed sector stakeholders to easily identify PBR protection on crop varieties registered for sale in Canada: <http://cdnseed.org/library/crop-kinds-database/>. Additional information is also available at www.PBRfacts.ca.

Key to 2015 Yield Tables

Yields derived over two or more growing seasons are the best indicator of variety performance. For new varieties, "2015 Average Yield" over all sites is more reliable than data from a single location. Use single site year data with caution.

CV% = Coefficient of Variation. A measure of random variation in a trial. A low CV is desirable.

LSD = Least Significant Difference. Varieties must differ by the LSD value to be considered significantly different from one another.

Sign Diff = Significant Difference. Indicates if a real difference exists between varieties at an individual site.

Special Crops

GRAIN CORN

Comments:

The 2015 grain corn hybrid trials were tested and the data donated by the Manitoba Corn Committee. The data presented is for one year only. Use with caution.

All hybrids are evaluated at a plant population of 30,000 plants per acre.

Yields are corrected to 15.5% moisture content.

The Manitoba Corn Committee publishes the annual results with all yearly data, as well as long term data, in their brochure which is available from the Manitoba Corn Grower's Association (204-745-6661).

1 Each company assigns a corn heat unit (CHU) rating to each of their hybrids. The CHU rating is a measure of relative maturity and is one criteria for choosing a hybrid which will mature in your area. Moisture content at harvest, density, and days to 50% silk are other measurements to look at when evaluating the relative maturity of a hybrid.

2 The Canadian Seed Trade Association (CSTA) website provides a database for corn hybrids available in Canada, available at <http://cdnseed.org/list-of-corn-hybrids/>. Information provided includes technology brand name and refuge requirements.

More expertise. More technology.
More of what you want.

INDUSTRIAL HEMP

Comments:

A licence from Health Canada is required to grow Industrial Hemp.

THC testing for some varieties is required.

As per the Industrial Hemp Regulations, industrial hemp varieties must be approved for commercial cultivation under licence for the current crop year. Please refer to Health Canada's "List of Approved Cultivars for the 2016 Growing Season" report prior to seeding.

Please note that the Industrial Hemp Regulations requires that all seed planted for the production of industrial hemp in Canada must be of pedigreed status (Certified or better).

For more information, please refer to Health Canada's website at www.healthcanada.gc.ca/hemp.

Safe Handling and Smooth Clean Out **Meridian Conveyors and SmoothWall Bins**

Protect the Quality of Your Seed.

Gentle on Seed: Extra long "beavertail" intake and wide exposed belt allows grain to gain momentum before inclining.

High Capacity: High horsepower engines standard on all conveyors helps maintain the "high capacity" standard.

Versatile: Our bins offer top quality storage for a wide variety of products including grain, seed, feed and fertilizer.

Dependable Storage: Meridian SmoothWall hopper bins help you ensure the quality and integrity of your seed.

Variety Description Key

Except for long term average yield and quality data, variety description information was obtained from the Co-operative Registration Trials.

Disease Resistance Ratings: (HS) highly susceptible; (S) susceptible; (MS) moderately susceptible; (MR) moderately resistant; (R) resistant; (n/a) not available.

⌚ Indicates a variety that is protected by Plant Breeder's Rights legislation that complies with UPOV 1978.

⌚ Indicates a variety that is protected by, or has been applied for and is pending, Plant Breeder's Rights legislation that complies with UPOV 1991.

The Canadian Seed Trade Association (CSTA) has launched the new Crop Varieties Registered in Canada and Plant Breeders' Rights Status database to assist seed sector stakeholders to easily identify PBR protection on crop varieties registered for sale in Canada: <http://cdnseed.org/library/crop-kinds-database/>. Additional information is also available at www.PBRfacts.ca.

Key to 2015 Yield or Quality Tables

Numbers in brackets indicate site years. Site years tested is the number of locations added up over the years that variety has been tested in trials against the check. The more site years the more dependable the data. Use data with caution when there are fewer than 3 site years for annual crops and 9 site years for perennial crops.

CV % = Coefficient of Variation. A measure of random variation in a trial. A low CV is desirable.

LSD = Least Significant Difference. Varieties must differ by the LSD to be considered significantly different from one another.

Forage Variety Registration Changes

Amendments to the Seeds Act, Seeds Regulations are now in effect that streamline the variety registration process for forage varieties.

Forage crops are moved to Part III of Schedule III of the Seeds Regulations. Recommending Committees are no longer required for the registration of forage crop varieties, since the testing and merit requirements are removed. Registration still requires a standard application package to enable the CFIA to continue to protect health and safety, prevent fraud, and facilitate seed certification.

FORAGE ADAPTATION & COMPARISON GUIDE

LEGUMES

Forage	Use	Longevity	Winter Hardiness	Tolerance to:			Preferred Climate and Growing Conditions
				Drought	Flooding	Salinity	
Alfalfa	Hay & Pasture	Long	Good	Good	Low	Low to Moderate	Widely adapted to most Manitoba soils but will not tolerate areas that have periodic flooding.
Aliske Clover	Hay & Pasture	Short	Fair	Poor	Moderate	Low	Low-lying moist areas.
Birdsfoot Trefoil	Pasture	Long	Good	Moderate	High	Low to Moderate	Moist areas.
Cicer Milkvetch	Pasture	Long	Good	Moderate to High	Low	Moderate	Widely adapted but exhibits its creeding habit best on more coarse textured soils.
Red Clover	Hay & Pasture	Short	Poor	Low	High	Low	Best suited to humid areas with moderate temperatures.
Sainfoin	Pasture	Long	Fair	High	Low	Low	Best on brown and dark brown soil areas. In very dry areas it yields poorly. Does well on thin gravelly soils.
Sweet Clover	Hay & Pasture	2-years	Fair	Moderate to High	Low	Moderate	Especially productive on fertile soils.

TAME GRASSES

Altai Wild Ryegrass	Pasture	Long	Excellent	High	Low	Very High	Loam & clay soils best, but grows on a wide range of soils. Doesn't appear adapted to Manitoba conditions.
Annual (Italian) Ryegrass	Hay & Pasture	Short annual 1 year	Poor	Low	High	Low	Produces best on soils of medium to high fertility and grows best with adequate moisture.
Creeping Foxtail	Pasture	Long	Good	Low	High	Moderate	Adapted to areas where reed canarygrass grows well and soil moisture is continually available.
Creeping Red Fescue	Pasture Lawn	Long	Excellent	Moderate	Moderate	Low	Does best in high rainfall areas. Will grow in wide range of soil types.
Crested Wheatgrass	Hay & Pasture	Long	Excellent	Moderate to High	Low	Low to Moderate	Adapted to dry areas with good soils but will also establish on lighter soils.
Dahurian Wild Ryegrass	Pasture	Short	Good	Moderate	Low	High	Adapted to all soil zones.
Intermediate Wheatgrass	Hay & Pasture	Short to Medium	Good	Moderate to High	Low	Low	Well drained soils with ample moisture.

SeCan
Our genes only come in blue.

When you purchase SeCan certified seed you're getting the promise and performance of SeCan genetics. And with certified seed, you're investing in the future of plant breeding and new varieties that contribute to your bottom line.

Make the comfortable choice.
Choose SeCan certified seed.

FORAGE CROPS

FORAGE ADAPTATION & COMPARISON GUIDE — Tame Grasses (continued)

Forage	Use	Longevity	Winter Hardiness	Tolerance to:			Preferred Climate and Growing Conditions
				Drought	Flooding	Salinity	
Kentucky Blue Grass	Pasture	Long	Excellent	Moderate	Moderate	Low	Prefers cool and humid. Grows on most soils.
Meadow Bromegrass	Hay & Pasture	Long	Good	High	Low	Low	Grows well on most soils where Smooth Brome does well.
Meadow Fescue	Pasture	Short - Medium	Good	Moderate	High	Low to Moderate	Prefers soil with good moisture and good drainage.
Meadow Foxtail	Pasture	Long	Good	Low	High	Low	Prefers cool moist conditions, high water table.
Orchard Grass	Hay & Pasture	Short	Fair	Moderate	Low to Moderate	Low	Prefers moist conditions. Sandy soils are too dry for good growth unless in high rainfall area.
Perennial Ryegrass	Hay & Pasture	Short	Poor	Low	Low	Low	Needs high precipitation and fertility for high yields. Adapted to wide range of soils.
Pubescent Wheatgrass	Hay & Pasture	Medium	Good	Moderate to High	Low	Low to Moderate	Widely adaptable to precipitation, temperature, elevation, and low fertility soil.
Russian Wild Ryegrass	Pasture	Long	Excellent	Very High	Low	Very High	Can be grown on a wide range of soils. Most productive on fertile loams.
Smooth Bromegrass	Hay & Pasture	Long	Excellent	Moderate	Moderate	Low to Moderate	Well adapted to all soils in Manitoba.
Tall Fescue	Pasture	Medium	Good	Moderate	Moderate to High	High	Variety of soils. Does well on wet, poorly drained soils.
Tall Wheatgrass	Hay & Pasture	Medium	Excellent	Low	High	High	Adapted to saline and imperfectly drained alkali soils.
Timothy	Hay & Pasture	Medium	Good	Low	High	Low	Cool moist areas with good drainage.

NATIVE GRASSES

Awned Wheatgrass	Hay & Pasture	Medium	Good	Moderate	Moderate	Low to Moderate	Prefers moderately sandy to loam soils with good moisture and drainage. Found in moist flats, meadows and low growing bushes.
Big Bluestem	Pasture	Long	Good	Low to Moderate	Moderate	Low to Moderate	Grows under a wide range of conditions.
Green Needlegrass	Pasture	Long	Good	High	Moderate	Low to Moderate	Performs best on medium to heavy textured soils. Prefers moist sites with good drainage.
Little Bluestem	Pasture	Long	Good	High	Low	Moderate	Sandy, gravelly soils with shallow water table or where snow accumulates. Common on prairie upland.
Northern Wheatgrass	Pasture	Long	Good	Very High	Moderate	Moderate	Prefers medium to coarse textured soil.
Prairie Cord Grass	Hay & Riparian	Long	Good	Low to Moderate	High	Low to Moderate	Wide range of soils (sand to clay) - does best on seasonally dry areas, marsh edges, wet meadows, drainageways.
Reed Canarygrass	Hay & Pasture	Long	Good	Moderate	Very High	Low	Moist cool climate. Poorly drained areas subject to temporary flooding.
Side Oats Grama	Hay & Pasture	Long	Good	Moderate to High	Low	Low to Moderate	Adapted to a range of soils. Performs best on fine textured soils. Found on rocky ridges, open grasslands and hillsides.
Slender Wheatgrass	Hay & Pasture	Medium	Good	Moderate	Moderate	High	Widely adapted - prefers sandy loams.
Switch Grass	Pasture	Medium	Fair	Low	Moderate	Moderate	It has potential for good summer pasture when enough moisture. Grows best on loam and sandy loams.
Western Wheatgrass	Hay & Pasture	Long	Excellent	High	Moderate to High	High	Widely adapted - prefers heavy moderately alkaline soil. Tolerates periodic flooding.

Comments:

The silage corn hybrid trial was tested and the data donated by the Manitoba Corn Committee.

The data presented is for one year only. Use with caution.

All hybrids were evaluated at a plant population of 28,000 plants per acre. Plots are planted at a higher rate and thinned to achieve the target population.

Yields are corrected to 65% moisture content.

The Manitoba Corn Committee publishes the annual results along with more detailed lab analysis in their brochure. The brochure is available by calling the Manitoba Corn Growers Association office at 204-745-6661.

1 Each company assigns a corn heat unit (CHU) rating to each of their hybrids. The CHU rating is a measure of relative maturity and is one criteria for choosing a hybrid which is suitable for your growing region.

2 The Canadian Seed Trade Association (CSTA) website provides a database for corn hybrids available in Canada, available at <http://cdnseed.org/list-of-corn-hybrids/>. Information provided includes technology brand name and refuge requirements.

3 Moisture content at harvest.

4 Milk per Acre was calculated using Milk 2006, a model developed by the University of Wisconsin Extension Service.

5 Beef per acre was calculated on the assumption that one pound of beef is produced for every six pounds of TDN.

ANNUAL FORAGE — Variety Descriptions

Variety descriptions for wheat, barley and oat crop types can be found in the Cereal Crops section of SEED Manitoba 2016 pages 17.

Field pea variety information can be found on page 84.

Quality is highly dependent on plant maturity at harvest. For optimum quality: harvest barley at early-mid dough stage; oats & triticale at milk- early dough stage; peas at early pod formation; millet at early heading.

1 Data collected over 6 years (2003-2008) on six sites: Arborg, Roblin (MB), Sutherland, Floral (SK), Lacombe, Edmonton (AB).

2 Forage quality: average values from a Manitoba Forage Council test in 2005-2010 on 4 sites (Arborg, Melita, Roblin, Rosebank).

3 Relative Feed Value (RFV), Crude Protein (CP), Total Digestive Nutrients (TDN). Beef, is an estimation of pounds of beef produced under optimum feeding conditions using a rule of thumb that one pound of beef requires an average of 6 lbs of TDN.

Check - Beaver Average Dry Matter Yield 8990 lb/ac (10,058 kg/ha) over 150 site years.

1 Creeping rooted alfalfa types can be more tolerant to grazing than tap rooted types, and may offer better winter hardiness.

2 Use: (H)Hay - developed for maximum yield; may have lower persistence under grazing;(P) Pasture - low growing, higher grazing tolerance. First letter is preferred use.

3 FD: indicates the varieties characteristic to go dormant in fall. FD 9: will grow vigorously in fall; FD 2: will have little fall growth evident. Varieties with ratings of 1 - 4 are considered adequately winter hardy for Manitoba conditions while those of 5 or higher are not well adapted. Varieties with higher ratings should be managed carefully.

4 WH: ability of plants to survive winter and be productive next year. Ratings utilize North American approved Winter Hardiness Zone ratings. Varieties are compared against known check varieties (1=most hardy, 5=least hardy). Score of 1 indicates adaptation to all zones, score of 2 indicates adaptability in zones 2 and above, score of 3 indicates adaptability in 3 and above. (See Winter Hardiness Zone map in front of forage section). Scores are from the Manitoba Forage Council and 3rd party northern US tests using a minimum of 4 sites years of data over 2 winters. Grazing Tolerance: University of Manitoba study (1996 - 1999) determined winter hardiness was more influential than grazing tolerance to stand persistence under grazing.

5 Maturity rating indicates relative comparison of first flowering dates. Early varieties will bloom before late varieties, may provide more cuts/year, but are less hardy.

6 Disease Resistance:(HR) highly resistant; (R) resistance; (MR) moderately resistant; (S) no resistance. Bacterial Wilt (BW), Verticillium Wilt (VW) Phytophythora Root Rot (PRR).

7 Multifoliate varieties have genetic potential to produce 4 or more leaflets per leaf. This trait is influenced by environmental conditions.

Check - Beaver Average Dry Matter Yield 8980 lb/ac (10,058 kg/ha) over 150 site years.

8 These numbers represent the long term average yields as a percent of Beaver, on a per cut basis.

9 Carberry data is from 2011 to 2014

10 The Neepawa site was moved to Rosebank in 2004.

11 The St.Pierre site was moved to Kelburn Farms (St.Adolphe) in 2009. The average mean yields in this column contain data from the following: Kelburn Farms (2009-2011); St.Pierre (1999-2008); Steinbach (1993-1998).

OTHER LEGUME — Variety Descriptions and Yield Comparisons (All Varieties have Limited Data)

Variety	Manitoba Mean % of Check	Use ¹	Winter Hardiness ²	Regrowth	Maturity	Notes ³	Seed Source

New Automated Model 919®

Moisture Tester...

the fastest 919® EVER!!!

Simply pre-weigh your sample...choose commodity and dump it in the test cell...% moisture is instantly displayed on the large LCD Screen. All Test data can be captured & saved using USB stick or optional Printer.
The next generation of 919® is here !!!!

TEST WEIGHT EQUIP.

ABS Funnel with 0.5L

measure& striker.

Smart Scoop Dig.

Bu. Wt Scale.

INFRA-RED BIN PROBE

10' length total, 2 - 5' sections that couple together. Quick temperature measurement without removing the probe.

Temperature displayed digitally on small hand held unit.

SMART CHARTS II

NEW Hand Held Automated

Smart Charts II. NO MORE PAPER

CHARTS! Choose your commodity,

enter temp. & dial drum # and

the % moisture is displayed.

Allows for temp. >30°C or <11°C.

NEW: 10' multi-zone rigid wireless bin probe with 4 temp. sensors. Fully wireless temp. measurement & display on Smart Charts II.

How can my farm benefit from **Seed Interactive**?

Cutlass is the **field pea** check variety in Seed Manitoba, but I want to compare with **Eclipse**, the variety I've grown on my farm.
How can I do that?

SEED Interactive Advantage: *Choose your own check.*

Seed Interactive allows you to select varieties suited to the agronomic and management practices on your farm. Use the **Variety Characteristics Report** to generate an overall summary using all data, or to compare disease resistance and general agronomic performance.

Use the **Yield Comparison Report** to compare two varieties at the same location. With both reports, choose your own check variety. It's easy and informative. Log on to customize selections for your farm. www.seedinteractive.ca

A Manitoba Crop
Variety Decision Tool

Additional Resources

Some things have changed,

some haven't.

Manitoba farmers are still producing some of the world's finest crops and livestock, and we're bringing them the information to help them do it even better.

Edsel of tractors sells for a record price

RECORD HIGH BID | There's more than one way to make money with a tractor

INTERNATIONAL HARVESTER'S M18-35 Titan tractor was a dud when it first hit the market in the early 1900s. But it's worth as much as a brand-new one.

The rare vintage tractor has fetched a MacGregor-area farmer what's believed to be the highest price ever paid for a collector tractor in Canada — a cool \$375,000.

"I could have held a pin drop before they said 'sold,'" said Bob Anderson, who bought the 1913 Model M Titan in the late 1970s. From a pile of parts and skeleton frame passed to him by a neighbour, The Aug. 11 death of Anderson's collection of IH-McCormick vintage equipment dating back to the 1920s was a welcome frapp

Is the grass always greener on the other side of the fence?

Use the Manitoba Management Plus Program to benchmark your farm's performance

Visit the MASC Manitoba Management Plus Program website at www.mmpp.com and you'll get unlimited access to on-farm variety and yield information provided by other Manitoba producers. This information will allow you to benchmark your own variety and yield performance against your neighbours!

The information you'll find lists actual on-farm variety performance reported to MASC by other Manitoba producers. It's unbiased, organized, and aggregated to keep individual data confidential. It will help you make smarter decisions and reduce your risk of losses.

One visit will provide you with the information you need to make sound decisions concerning what crops to plant, what fertilizers you should use, seeding data and other useful agronomic information.

The Manitoba Management Plus Program – just one more way MASC is providing outstanding client service to you.

Setting New Standards

6074 RR & 6080 RR

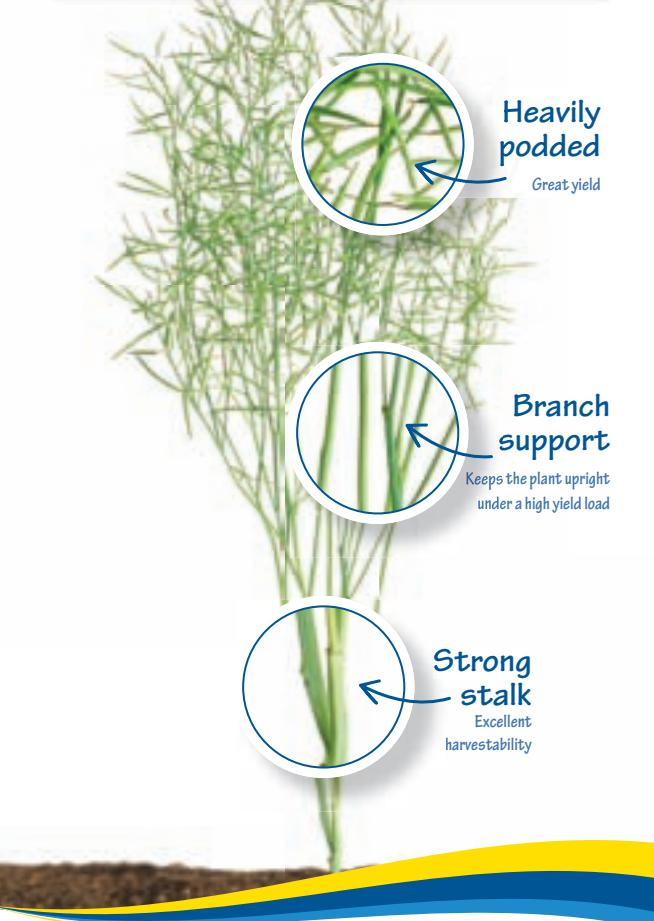

Industry-leading yield and harvestability

Introducing 6074 RR and 6080 RR - the NEW standards in Genity® Roundup Ready® Canola performance. 6074 RR was the highest yielding GENRR in the 2014 Canola Performance Trials¹. 6080 RR has all the yield potential of 6074 RR and earlier maturity. Look for trial results this fall for both of these varieties.

Be sure to get your orders in for these two exceptional varieties. Just another example of world-class products, provided to you from your local seed company.

TELL US ABOUT YOUR EXPERIENCE WITH BrettYoung CANOLA:

Twitter @BY_Seeds | #BYCanola15

BrettYoungTM

Home Grown, World Class.

Visit brettyoung.ca | 1-800-665-5015

¹ 6074 RR reported an average of 109% of check DKL 73-75 in all zones. See [www.canolaperformance trials.com](http://canolaperformance trials.com) for complete trial results.

BrettYoung™ is a trademark of Brett-Young Seeds Limited. Genity® and Roundup Ready® are registered trademarks and used under license from Monsanto Company. Always follow grain marketing and all other stewardship practices and pesticide label directions. Details of these requirements can be found in the Trait Stewardship Responsibilities Notice to Farmers printed in this publication. 5032 10/15

Trait Stewardship Responsibilities Notice to Farmers

Monsanto Company is a member of Excellence Through Stewardship® (ETS). Monsanto products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Monsanto's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Commercialized products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Roundup Ready® crops contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant to glyphosate. Acceleron® seed treatment technology for canola contains the active ingredients difenoconazole, metalaxyl (M and S isomers), fludioxonil and thiadimenoxam. Acceleron® seed treatment technology for canola plus Vibrance® is a combination of two separate individually-registered products, which together contain the active ingredients difenoconazole, metalaxyl (M and S isomers), fludioxonil, thiadimenoxam, and sedaxane. Acceleron® seed treatment technology for corn [fungicides and insecticide] is a combination of four separate individually-registered products, which together contain the active ingredients metalaxyl, trifloxyprostibin, ipconazole, and clothianidin. Acceleron® seed treatment technology for corn [fungicides only] is a combination of three separate individually-registered products, which together contain the active ingredients metalaxyl, trifloxyprostibin and ipconazole. Acceleron® seed treatment technology for corn with Poncho®/Votivo™ [fungicides, insecticide and nematicide] is a combination of five separate individually-registered products, which together contain the active ingredients metalaxyl, trifloxyprostibin, ipconazole, clothianidin and Bacillus firmus strain I-1582. Acceleron® seed treatment technology for soybeans [fungicides and insecticide] is a combination of four separate individually registered products, which together contain the active ingredients fluxapyroxad, pyraclostrobin, metalaxyl and imidacloprid. Acceleron® seed treatment technology for soybeans [fungicides only] is a combination of three separate individually registered products, which together contain the active ingredients fluxapyroxad, pyraclostrobin and metalaxyl. Acceleron®, DEKALB and Design®, DEKALB®, Genity and Design®, Genity®, JumpStart®, RIB Complete and Design®, Acceleron®, RIB Complete®, Roundup Ready 2 Technology and Design®, Roundup Ready 2 Yield®, Roundup Ready®, Roundup Transorb®, Roundup WeatherMAX®, Roundup®, SmartStar and Design®, SmartStar®, Transorb®, VT Double PRO®, and VT Triple PRO® are registered trademarks of Monsanto Technology LLC, Used under license. Vibrance® and Fortenza® are registered trademarks of a Syngenta group company. LibertyLink® and the Water Droplet Design are trademarks of Bayer. Used under license. Herculex® is a registered trademark of Dow AgroSciences LLC. Used under license. Poncho® and Votivo™ are trademarks of Bayer. Used under license. All other trademarks are the property of their respective owners.

STORM 

TAKE THE GUESSWORK OUT OF SEED TREATMENT WITH THE
STORM SEED TREATER.

The STORM (Seed Treatment Optimized Rate Metering) is the latest innovation in seed treatment equipment, delivering precision application in a convenient and simple to use package for in-the-yard treating that you control. Specifically designed to maximize the return of seed applied products and to take the guesswork out of the treatment process.

Insure® Cereal

Fungicide Seed Treatment

We'd never say farming in this country is easy. That's why we created Insure® Cereal. It's an advanced fungicide seed treatment that provides the most complete control of seed- and soil-borne diseases caused by fusarium. Insure Cereal is also the only cereal seed treatment that delivers the benefits¹ of AgCelence® – more consistent and increased germination even in cold weather, increased seedling vigour both above and below ground and better ability to manage environmental stress.² To learn more visit agsolutions.ca/insurecereal or call AgSolutions® Customer Care at 1-877-371-BASF (2273).

 **BASF**
We create chemistry

¹AgCelence benefits refer to products that contain the active ingredient pyraclostrobin. ²All comparisons are to untreated, unless otherwise stated.

Always read and follow label directions.

AgSolutions is a registered trade-mark of BASF Corporation; AgCelence, and INSURE are registered trade-marks of BASF SE; all used with permission by BASF Canada Inc. INSURE CEREAL should be used in a preventative disease control program. © 2015 BASF Canada Inc.
