

# Pulse Crops

## Variety Description Key

A “CHECK CHARACTERISTICS” box has been placed at the bottom of each table to display the long term yield, site years, maturity and any other check attributes.

Except for the long-term average yield, variety description information obtained from the Co-operative Registration Trials. For relative maturity, please keep in mind the actual number of days to reach maturity will depend on local climactic conditions and to some extent on management practices.

“Resistance Level” ratings: VG = Very Good; G = Good; F = Fair; P = Poor; VP = Very Poor; “n/a” = not available

Site Years Tested is the cumulative number of locations over the years that a variety has been tested against the check variety. The more site years, the more dependable the data.

Ⓢ Indicates a variety that is protected by Plant Breeder’s Rights legislation that complies with UPOV 1978

Ⓢ Indicates a variety that is protected by or has been applied for and is pending, Plant Breeder’s Rights legislation that complies with UPOV 1991

TKW (Thousand Kernel Weight) is the weight in grams of 1000 seeds.

## Key to 2023 Yield Tables

Yields derived over two or more growing seasons are the best indicator of variety performance. For new varieties, the average yield over all sites is more reliable than data from a single location. Use single site year data with caution.

CV % = Coefficient of Variation. A measure of random variation in a trial. A low CV is desirable.

LSD = Least Significant Difference. Varieties must differ by the LSD to be considered significantly different from one another.

Sign Diff = Significant Difference. Indicates if a real difference exists between varieties at an individual site.

# Manitoba Agriculture Variety Guide

## FABABEANS

### Comments:

The fababean variety trial was tested by MCVET and partially sponsored by the Manitoba Pulse & Soybean Growers.

Traditionally tannin fababean with tan coloured seed coats and coloured flowers contain tannins and can't be fed directly to livestock.

Low tannin fababeans have white seed coats and flowers and can be fed directly to livestock.

# FIELD BEANS – MANITOBA NARROW ROW ADAPTATION TRIALS

## Comments:

Long term yield data and days to maturity are Manitoba Pulse & Soybeans Growers (MPSG) Trials grown in 10 to 12 inch row spacing.

More detailed measurements from the trials are available to MPSG members and will be distributed in the December Special Edition of the Pulse Beat magazine.

Days to maturity is critical. Do not select a variety that will not mature in time, under normal growing conditions.

Early fall frost severely affects yield and quality.

# FIELD BEANS – WIDE ROW TRIALS

## Comments:

Long term yield data and days to maturity are from Manitoba Pulse & Soybean Growers (MPSG) trials.

Individual site and more detailed measurements from these trials are available to MPSG member and distributed free in the Winter Edition of the Manitoba Pulse Beat to all MPSG members in good standing.

Results are from row crop trials located at Morden, Portage, Carman, and Winkler sites.

T9905				2009	2426	43	99
Vibrant				2015	2803	24	94

<sup>1</sup> Annual weather variations will impact the actual number of days it takes a variety to fully mature varies from year to year.

Choosing a variety that needs a longer growing season than your farm has, increases your risk of frost damage and lower returns.

AAC Carver⓪	77		84										
	bu/acre		Days										

1 Relative maturity ratings compared to check AAC Carver determined at Manitoba trial sites, Maturity equal or up to 2 days later consider early, 5 days plus considered long.

2 Varieties which show good disease tolerance to one strain of Fusarium wilt may be susceptible to other strains.

3 Green seed coats: G = 0-10%; F = 11-25%

4 Seed coat dimpling rating : VG = 0-5%; G = 6-20%; F = 21-50%

For Protein data on Peas please go to Seed Manitoba online:

A number of new varieties are participating in a Variety Use Agreement (VUA). If producers purchase a VUA variety and divert some of that grain at harvest for seed use, they will be invoiced a Variety Use Fee for use of the seed. Ask your retailer about your obligations to the Variety Use Agreement (VUA) when purchasing seed.

## Quality Seed Service You've Come to Trust

### Certified Seed

#### Synergy barley

Great yield potential. Unique quality profile that lends to both the adjunct and craft brewing markets.

#### Carver peas

A field pea suited to every area and situation. Very good yields. Early maturity. Large seed size

#### Allison fava beans

Low Vicine and Convicine. High yielding. Small seed size. Feed and food markets suitable. Closed loop contracting w/Prairie Fava.

#### Manness wheat

Very high yield potential. Strong standing. Short semi-dwarf. Early maturity. Improved protein.

#### Starbuck wheat

Great combination of short, strong straw and disease resistance in a MTW. MR to FHB.

#### Hodge wheat

Top-in-class standability. Excellent disease package. 'MR' for FHB, 'R' to all other priority one diseases. Wheat midge tolerant.

Please contact us for all your certified seed needs, as well as our on-site seed cleaning facility using optical sorting technology.
